INTELLIGENCE BRIEF / N° 022 · WARM

Ørsted A/S

Renewable Energy / Offshore Wind · Fredericia, Denmark · CPH: ORSTED (~$4.5B 2026 EBITDA; world's largest offshore-wind developer)

Ørsted - the world's largest offshore-wind developer and the textbook fossil-to-green transformation - has never been in motorsport, and a renewable-energy icon on the electric racing championship is a near-perfect thematic match (tempered by its cost-cutting turnaround).

Opportunity / 100	Timing Window	Series	Recommended Team	Action Horizon
69	**WARM**	**FE**	**Jaguar TCS Racing**	**10-14 WKS**

THE CASE

Ørsted A/S, the world's largest offshore-wind developer (10.2 GW installed, 8.1 GW under construction) and the textbook corporate decarbonisation story - it transformed from the Danish fossil-fuel utility DONG Energy into a pure-play renewables leader - is recovering operationally (Q1'26 EBITDA DKK 9.5B, +11%) after recapitalising through a ~$9.4B rights issue and cost cuts following the US offshore-wind crisis. It has never entered motorsport. The thematic fit with Formula E - the first net-zero-certified series - is elite: a renewable-energy icon on the world's electric racing championship. HONEST framing: Ørsted is mid-turnaround and cutting costs, so a new sponsorship is a harder internal sell and the team-level workstream is verified renewable power plus the decarbonisation narrative (off-car) - the score reflects this. Verified decision path: CEO Rasmus Errboe (in post since Feb 2025) as C-level sponsor, with Head of Branding & Marketing Rebecca Perry owning brand/sponsorship.

WHY NOW

Ørsted has stabilised post-rights-issue and is rebuilding its narrative, and Formula E is the most on-message stage for a renewables leader during the energy transition. But the honest 'why now' is positional, not urgent: build the relationship while the company reframes its story - it is not in a free-spending moment, so lead with a right-sized, high-credibility structure.

PROOF POINTS — EVERY FIGURE VERIFIED TO A PRIMARY SOURCE (SEE P.2)

- **10.2 GW** — Installed offshore wind capacity (8.1 GW more under construction)
- **~$9.4B** — Recapitalisation (rights issue) + cost cuts after US offshore-wind crisis
- **DKK 9.5B** — Q1'26 EBITDA (ex new partnerships/cancellation fees, +11% YoY)
- **Rasmus Errboe** — Group President & CEO (since Feb 2025; decision-maker/sponsor)
- **fossil-to-green** — Origin: transformed from fossil utility DONG Energy to renewables pure-play

BOTTOM LINE

The world's largest offshore-wind developer and the textbook fossil-to-green transformation (former DONG Energy) - 10.2 GW installed, 8.1 GW building. Elite thematic fit for electric racing's sustainability mission. HONEST caveat: Ørsted is mid-turnaround after the US offshore-wind crisis (a ~$9.4B rights issue + cost cuts), so discretionary sponsorship spend is constrained - scored accordingly. Decision path: CEO Rasmus Errboe + Head of Branding & Marketing Rebecca Perry.

WHY JAGUAR TCS RACING

Jaguar TCS Racing's identity is explicitly British 'sustainability + IT services', so a renewables icon is a clean fit, and its renewable-energy lane reads open. The workstream centres on verified renewable power and the decarbonisation story rather than car technology.

VALUE TO JAGUAR TCS RACING — MODE B (TECH SERVES THE TEAM OPERATION)

MODE B with concrete mechanics (not a bare logo). (1) RENEWABLE POWER: Ørsted can supply and certify verified renewable electricity (PPAs / green certificates) for the team's facilities and race operations and co-build the hard-data sustainability story that FE's net-zero agenda rewards - a real, if off-car, operational contribution. (2) COMMERCIAL / B2B: Ørsted sells to governments, utilities and corporate green-power buyers, many of whom engage FE via host-city and sustainability programmes - team hospitality becomes a channel, while Jaguar gains a globally iconic sustainability anchor. (3) BRAND / TALENT: 'the company that decarbonised itself, on the championship that races on electricity' is a powerful, ownable co-marketing narrative, plus a clean-energy engineering-talent halo. Jaguar gets verified renewable power and an iconic anchor; Ørsted gets an on-message global stage to rebuild its brand.

DEAL ARCHITECTURE

Official Renewable-Energy Partner on Jaguar TCS Racing, minimum three years, right-sized to a value tier (~$2-4M/yr given the turnaround), centred on verified renewable power for the team plus a decarbonisation-narrative and co-marketing programme.

PRIMARY DECISION-MAKER

Rasmus Errboe

GROUP PRESIDENT & CEO, ØRSTED - VERIFIED (SINCE FEB 2025)

CEO leading Ørsted's turnaround and brand reset - the C-level sponsor. Decision path: brand/sponsorship owned by Head of Branding & Marketing Rebecca Perry; Errboe as executive sponsor; the regional commercial/green-power leadership as the counterpart for a renewable-power workstream. (Given the cost-cutting turnaround, frame any deal as right-sized and high-credibility.)

OPENING ANGLE

> *"You turned a fossil utility into the world's renewables leader, and Formula E is the first net-zero sport. As you rebuild the brand, a right-sized renewable-power partnership with Jaguar tells that story to a global audience. 25 minutes?"*

SCORE COMPOSITION

TIMING	CAPACITY	BRAND FIT	URGENCY	OPS FIT
14 / 20	**14** / 20	**17** / 20	**11** / 20	**13** / 20
Operationally recovering (Q1'26 EBITDA DKK 9.5B, +11%) after recapitalising via a ~$9.4B rights issue - a turnaround inflection, not a peak-demand surge, so timing is moderate.	A large public energy company (~$4.5B 2026 EBITDA), but in active cost-cutting and balance-sheet repair, so discretionary brand/ sponsorship spend is genuinely constrained right now.	A renewable-energy and decarbonisation icon (the famous fossil-to-green transformation) on the world's electric racing championship is a near-perfect thematic match - the heart of FE's identity.	No dated FE trigger, and the turnaround focus could deprioritise sponsorship - the case is positional, not urgent.	MODE B: the team-level value is verified renewable power (PPAs/green certificates) for the team's operations and events plus the decarbonisation narrative - real but off-car.

RISKS & COUNTERS

COST-CUTTING TURNAROUND Ørsted just did a ~$9.4B rights issue and is cutting costs - a new sponsorship is a hard internal sell now. **Counter:** Right-size to a value tier with a clear brand-rebuild rationale and verified-renewable-power substance; treat as a relationship to build, not a marquee spend to force.

WORKSTREAM IS OFF-CAR (BRAND-LEANING) Ørsted doesn't make race-car tech; the team value is renewable power + narrative. **Counter:** Scored MODE-B accordingly; name concrete mechanics (PPAs/green certificates for the team, decarbonisation data) rather than a logo.

EVENT POWER OFTEN PROMOTER-RUN FE's event infrastructure is partly run by the promoter, not the team. **Counter:** Anchor the renewable-power workstream at the team/facility level and co-develop the sustainability narrative.
