

ProLogium Technology

Solid-State Battery Technology · Taoyuan, Taiwan · Going public via TDAC SPAC (Nasdaq: PRLG; ~\$3.8B; H2 2026)

ProLogium - the 20-year solid-state-battery leader, Mercedes-Benz-backed and going public on Nasdaq as PRLG at ~\$3.8B - has never been in motorsport, and the battery-future story maps onto Formula E's all-electric identity (as a brand play, not an on-car deal).

THE CASE

ProLogium Technology, founded by Vincent Yang, is a 20-year solid-state-battery developer: Mercedes-Benz is a technology partner, investor and board member, and at CES 2026 it unveiled an all-inorganic solid-state lithium-ceramic battery (all-silicon anode). It is going public on Nasdaq as PRLG through a ~\$3.8B SPAC merger with Translational Development Acquisition Corp. (announced May 2026, closing H2 2026) and has broken ground on a EUR5.2B, 48 GWh gigafactory in Dunkirk, France (with EU grant approval). It has never touched motorsport. The thematic fit with Formula E - the all-electric championship - is elite: solid-state is the headline battery-future story. HONEST framing: FE runs a single spec battery supplied to all teams, so a cell maker cannot put its product in the race car. This is therefore a brand / future-battery halo (MODE B), not an in-car workstream, and it is scored accordingly. Verified decision-maker: Founder & CEO Vincent Yang (confirm the brand/commercial lead before outreach).

WHY NOW

ProLogium is at a capital and identity inflection - going public as PRLG via a ~\$3.8B SPAC merger (closing H2 2026) and building its EUR5.2B Dunkirk gigafactory - which is exactly when a company invests in brand. Formula E is the most on-message global stage for a solid-state-battery brand, so the value of engaging now is to claim that association early; there is no dated FE trigger.

GRID FIT — CATEGORY-WHITESPACE CHECK ACROSS THE FE GRID (1440 TEAM-FIT ENGINE)

Mahindra Racing	PRIME LANE	greenfield entry — partner roster being built from zero
Porsche	OPEN	no rival in this category lane
Jaguar TCS Racing	OPEN	no rival in this category lane
Nissan	OPEN	no rival in this category lane

BOTTOM LINE

The solid-state-battery leader (20 yrs) is going public on Nasdaq as PRLG via a ~\$3.8B TDAC SPAC merger and is building a EUR5.2B / 48 GWh gigafactory in Dunkirk, France - a clear capital + identity inflection. Solid-state is the marquee battery-future story and Formula E is the battery-racing series, so the thematic fit is elite. KEY CONSTRAINT: Mercedes-Benz is a ProLogium investor with a board seat, and Mercedes exited FE - so the team must be a NON-Mercedes-rival; Mahindra (mass-market EV, not a premium competitor) fits, while Jaguar/Porsche would create partner friction. HONEST: FE runs a SPEC battery, so this is off-car - a brand / future-battery halo (MODE B) - scored accordingly. Founder-CEO Vincent Yang.

DISCOVERY: SELF

WHY MAHINDRA RACING

Team choice is constrained by ProLogium's most important relationship: Mercedes-Benz is an investor with a board seat. Mercedes exited FE, so there is no home team via that tie - and pointing ProLogium at a direct premium Mercedes rival (Jaguar or Porsche) would create partner-politics friction at board level. Mahindra Racing is the clean answer: an Indian, mass-market EV maker and founding FE team that does NOT compete with Mercedes in its premium segments, builds its own powertrain, and carries a credible EV-innovation identity. No FE team has a battery/cell partner, so the 'battery future' lane is open (off-car, brand-led).

VALUE TO MAHINDRA RACING — MODE B (TECH SERVES THE TEAM OPERATION)

MODE B with named mechanics (not a bare logo). (1) BRAND / NARRATIVE: 'the solid-state battery of the future, on the championship that proves electric racing' is an ownable, on-message co-marketing story for a sustainability-led team, with a strong content line on next-gen energy density and safety. (2) COMMERCIAL / B2B: ProLogium's buyers and partners are automakers and cell/module makers (Mercedes-Benz, FEV) - exactly the manufacturers and suppliers in the FE paddock, so team hospitality becomes a working channel, while Mahindra gains a well-capitalised, newly-public battery-tech anchor. (3) TALENT / CREDIBILITY: a battery-innovation halo for the materials and powertrain engineers both sides compete for, and a credible 'future of EV' association. Honest caveat: because FE uses a spec battery, none of this is an on-car deployment - it is brand, content and ecosystem value, which is why it is scored MODE B.

DEAL ARCHITECTURE

Official Battery-Technology / Innovation Partner on Mahindra Racing, minimum three years, right-sized to a value tier (~\$2-4M/yr given the capex focus), centred on a brand + content programme around the battery-future story and EV-supply-chain ecosystem access - explicitly not an on-car technical deal.

PRIMARY DECISION-MAKER

Vincent Yang

FOUNDER & CEO, PROLOGIUM TECHNOLOGY - VERIFIED

Founder and CEO of ProLogium, the owner of brand and strategic-partnership decisions, and the natural entry point as the company goes public. Decision path: Yang (founder/strategy) with the brand/commercial leadership as counterpart (confirm the named marketing owner before outreach); the Mercedes-Benz board relationship is a credibility anchor, not the FE route.

OPENING ANGLE

"Vincent - as ProLogium goes public, Formula E is the world's stage that proves electric performance, and no battery story is bigger than solid-state. A brand partnership with Mahindra - a founding FE team, no conflict with your Mercedes relationship - puts the battery of the future on the championship built on batteries. 25 minutes?"

SCORE COMPOSITION

TIMING

16 / 20

Going public on Nasdaq (PRLG) via a ~\$3.8B TDAC SPAC merger announced May 2026 (closing H2 2026) and breaking ground on a EUR5.2B Dunkirk gigafactory (Feb 2026) - active capital and a clear identity inflection now.

CAPACITY

14 / 20

A ~\$3.8B going-public valuation with Mercedes-Benz and EU backing confirms the company exists at scale, but it is capex-focused (EUR5.2B gigafactory build), so discretionary sponsorship spend is realistically value-tier - scored honestly, not as a marquee budget.

BRAND FIT

15 / 20

Solid-state is the marquee battery-future story and Formula E is the all-electric championship, so the thematic fit is elite and the battery/energy lane is open on Mahindra - but trimmed one point because the Mercedes-Benz board tie rules out the premium teams (Jaguar/Porsche) and constrains the brand alignment.

URGENCY

12 / 20

The inflection is corporate (the SPAC listing and gigafactory), not a dated FE trigger, and the team workstream is off-car - so the value of acting now is positional, not urgent.

OPS FIT

12 / 20

MODE B (honestly): Formula E uses a single spec battery, so a cell maker cannot deploy in the race car - the team value is brand, content and a future-battery narrative plus EV-supply-chain buyer access, not an in-car system.

RISKS & COUNTERS

MERCEDES-BENZ BOARD TIE CONSTRAINS TEAM CHOICE Mercedes is a ProLogium investor with a board seat; pointing it at a premium Mercedes rival (Jaguar/Porsche) would create partner-politics friction, and Mercedes itself is no longer in FE. **Counter:** Recommend Mahindra - a mass-market EV maker that does not compete with Mercedes in its premium segments - so the FE brand play sits clear of the Mercedes relationship rather than against it.

OFF-CAR (SPEC BATTERY) FE uses a single spec battery, so ProLogium cannot deploy its cells in the race car. **Counter:** Pitch and score it honestly as a brand / future-battery halo (MODE B) with content + ecosystem value, not an on-car workstream - that honesty is the credibility.

CAPEX-FOCUSED, NEWLY PUBLIC ProLogium is spending EUR5.2B on Dunkirk and listing via SPAC (PRLG, not yet closed), so sponsorship spend is discretionary and value-tier. **Counter:** Right-size to ~\$2-4M/yr tied to a brand/content programme; structure to begin on/after listing close (H2 2026); the ~\$3.8B listing confirms deal-capability at that level.
