

Redwood Materials

Battery Recycling / Circular Battery Materials · Carson City, NV · Private (\$6B+; Series E expanded Jan 2026; ~\$2.3B equity + \$2B DOE loan)

Tesla co-founder JB Straubel's Redwood Materials raised a \$425M Series E at \$6B+ (Google/Alphabet joined) and is the battery-circularity leader - never in motorsport, and a uniquely on-message fit for electric racing, with the battery lane open on Andretti.

THE CASE

Redwood Materials, founded by Tesla co-founder and former CTO JB Straubel, is North America's battery-circularity leader - recycling end-of-life batteries and producing sustainable cathode and anode materials for automakers and cell makers. It expanded its Series E to \$425M at a \$6B+ valuation (Jan 2026, as Google/Alphabet joined existing backers including Nvidia's NVentures, Capricorn and Goldman Sachs), on top of ~\$2.3B in equity raised and a \$2B Department of Energy loan commitment, and it has added a fast-growing, profitable second-life arm (Redwood Energy) that redeploys retired EV batteries as grid storage for AI data centres. It has never touched motorsport. For an all-electric championship whose Gen4 era (2026-2030) is built on circular design and recyclable materials, a battery-circularity leader is an unusually on-message partner. Battery-materials is crowded grid-wide (Umicore partners Mahindra; Envision's parent makes cells), but the lane is open on Andretti - its materials partner NAGASE works in carbon-fibre/composite recycling, a distinct stream - and Andretti is the American, sustainability-leading, charter FE team that fits an American circularity champion. Led by founder-CEO Straubel, the right and only real entry point.

WHY NOW

Post-Series E, Redwood has fresh capital and is scaling commercially (including a profitable new energy-storage line), which is when companies invest in brand and category leadership. There is no hard external clock, so the value of moving now is positional: claim the open battery-circularity lane on the right team before the category - already filling at Mahindra and Envision - consolidates across the grid, and build the founder relationship while inbound interest is still low (~30).

BOTTOM LINE

JB Straubel's (Tesla co-founder) battery-circularity leader: \$6B+ after a \$425M Series E (expanded Jan 2026 as Google/Alphabet joined), ~\$2.3B equity raised plus a \$2B DOE loan, and a fast-growing, profitable second-life grid-storage arm. Battery circularity is the most on-message story in electric racing - and while battery-materials is crowded grid-wide (Umicore at Mahindra, Envision AESC), that lane is open on Andretti (NAGASE there is composites, not batteries). Founder-CEO Straubel is the entry.

WHY ANDRETTI

Andretti is the American, charter, sustainability-leading FE team - a clean cultural match for an American battery-circularity champion - and its battery-materials/recycling lane is open (NAGASE covers composites, TWG AI covers AI, Porsche the powertrain). It lets Redwood own a distinct, on-message 'circular battery' category rather than competing with an incumbent, with a relationship that can run the full Gen4 cycle.

VALUE TO ANDRETTI — MODE B (TECH SERVES THE TEAM OPERATION)

MODE B with real, named mechanics across three fronts. (1) SUSTAINABILITY / CIRCULARITY WORKSTREAM: Redwood recycles batteries and makes sustainable cathode materials, and its second-life arm redeploys retired packs as grid storage - a credible basis to build and certify a genuine closed-loop battery story for the team (end-of-life cell recovery, recycled-content sourcing, second-life energy at the team's facilities) that Formula E's audience and the FIA's net-zero/Gen4 circular-design agenda actually reward - hard substance, not a green logo. (2) COMMERCIAL / B2B: Redwood's customers and targets are automakers and cell makers, exactly the manufacturers and suppliers who populate the Formula E paddock - so team hospitality becomes a working channel into the EV-supply-chain decision-makers Redwood needs, while Andretti gains a well-capitalised (\$6B+) circularity anchor in a category it currently lacks. (3) BRAND / CONTENT / TALENT: JB Straubel's Tesla pedigree and 'the company closing the loop on the batteries that race' is a powerful, ownable co-marketing narrative, with a content series on battery circularity and a recruiting halo for the battery/materials/energy engineers both sides compete for. Andretti gets a distinctive circularity partner and a real sustainability-data story; Redwood gets an on-message global brand stage and access to its exact buyers.

DEAL ARCHITECTURE

Official Battery Circularity / Sustainable Materials Partner tier on Andretti, minimum three years (aligned to the Gen4 cycle), ~\$3-5M/yr, with category exclusivity in battery recycling/materials and a defined closed-loop + content activation workstream.

PRIMARY DECISION-MAKER

JB Straubel

FOUNDER & CEO, REDWOOD MATERIALS - VERIFIED (TESLA CO-FOUNDER AND FORMER CTO)

Founder and CEO, and as a Tesla co-founder one of the most credible figures in the EV world - the owner of brand and strategic-partnership decisions at this founder-led company, and the right (and effectively only) entry point. Approach Straubel with a substance-led closed-loop thesis tied to FE's Gen4 circular-design agenda, not a logo pitch.

OPENING ANGLE

"JB - Formula E's Gen4 era is built on circular design, and no one closes the battery loop like Redwood. Andretti is American, a sustainability leader, and its battery lane is open. A real closed-loop workstream and content engine, not a logo. 25 minutes?"

SCORE COMPOSITION

TIMING 16 / 20 Expanded its Series E to \$425M (Jan 2026, as Google/Alphabet joined existing backers) at \$6B+, and is scaling a fast-growing, profitable second-life energy-storage business - active capital and momentum now.	CAPACITY 17 / 20 \$6B+ valuation, ~\$2.3B equity raised plus a \$2B DOE loan commitment - easily funds a multi-year FE partner tier.	BRAND FIT 16 / 20 Battery circularity is uniquely on-message for an all-electric championship; the battery-materials/recycling lane is open on Andretti, though it is crowded grid-wide (Umicore at Mahindra, Envision AESC) - a strong but not pristine category.	URGENCY 11 / 20 Well-funded and private with no imminent IPO or competitor clock - the value of acting now is positional, not a dated trigger.	OPS FIT 14 / 20 MODE B leaning A: battery recycling, sustainable cathode materials and second-life storage genuinely relate to FE's battery lifecycle - a credible circularity and content workstream, though not an in-car race system.

RISKS & COUNTERS

CATEGORY CROWDED GRID-WIDE Battery-materials partners already sit at Mahindra (Umicore) and Envision (AESC cells). **Counter:** Claim a team-level position on Andretti, where the lane is genuinely open - not grid-wide exclusivity; the differentiated American-team + circularity-leadership narrative is the wedge.

CAPITAL-INTENSIVE, MISSION-FOCUSED A heavy-industry company building gigafactories may see motorsport as off-mission. **Counter:** Frame as access to EV-supply-chain buyers, a certified closed-loop sustainability story, and a talent magnet - kept value-to-mid and tied to measurable outcomes.

OVERLAP PERCEPTION WITH NAGASE Andretti already has a materials/recycling partner (NAGASE). **Counter:** NAGASE works in carbon-fibre/composite recycling - a distinct material stream from battery circularity; position Redwood precisely in batteries, where the lane is open and complementary.
