
INTERNAL PROPOSAL · FOR RICKY PAUGH, MANAGING PARTNER

The Origination Desk

Insight-led origination for 1440 Sports — a verified, motorsport-matched sponsor prospect, delivered every morning, walked into the meeting ready.

Our scarcest asset is partner time — and most of it is spent *finding*, not closing.

THE GRIND

Every live conversation starts with the same manual work: which enterprise or pre-IPO company is ripe to sponsor **right now**, why now, which team, and is the claim even true. Hours of desk research per prospect.

THE CEILING

That manual top-of-funnel caps how many qualified conversations we can run at once. We don't have a closing problem — Ricky and the partners close. We have a **throughput problem at origination**.

THE RISK

One confidently-wrong fact in front of a CMO costs a relationship. So the research has to be both **fast and verified** — the two things hardest to do by hand at volume.

It is the exact discipline you sold for a decade at CEB: reps win when they walk in with insight, not when they prospect harder. **We have automated the insight.**

An origination engine that turns market signals into partner-ready briefs.

Not a database — the market already has those. A **judgment layer**: it decides who to call this week, why now, which team, and hands you the brief to send, with every load-bearing fact checked.

One signal a day. A weekly cadence — three Formula E, three Formula 1, and a Sunday "decision day" GO pick across both.

The moat isn't the AI. It's the verification discipline.

- ◆ **Claim-level citations.** Every figure, name and date is bound to a primary source URL — and must reappear in the prose, or the engine flags drift.
- ◆ **A hard trust gate.** A generic decision-maker, an uncited number, a stale fact or a category overclaim is a BLOCKER — the brief will not send until it's fixed.
- ◆ **Conflict-checking.** The team-fit engine refuses to claim "open category" on a team that already carries a rival in that lane.
- ◆ **Truth over punch.** When a claim can't be confirmed, the engine writes the weaker true sentence instead of the bold unverified one.

"Every figure verified to a primary source."

~\$1.5B

Cohesity pro-forma ARR

28%

Adjusted cash-EBITDA margin

~\$7.2B

Glean Series F valuation

2030

Mahindra Gen4 commitment

This is what protects the logo. It is the difference between a tool and something you'd put your name behind.

Cohesity → Cadillac F1 Team

82₁₀₀ · HOT

THE SIGNAL

Nvidia-backed, ~\$1.5B pro-forma ARR at 28% margin after the Veritas combination, steering toward a **2026 IPO** benchmarked against Rubrik — and it has never touched motorsport.

WHY NOW

An IPO is the single largest brand-elevation moment in a company's life. The 12 months around it are when leadership spends on institutional credibility — exactly what a multi-year F1 deal trades in.

THE MATCH

No pure-play backup & data-resilience brand owns the F1 grid. Cadillac debuts in 2026 with a greenfield tech roster (IFS for ERP, TWG for AI) and **no data-protection partner** — a founding lane to own, and a US flag-bearer for a US-market IPO.

DEAL ARCHITECTURE

Founding Data Resilience Partner

TERM	3–4 years
VALUE	\$4–7M / yr
MODE	A — tech in the car
DECISION-MAKER	Carol Carpenter, CMO
CROWDING	~45 — early

"Carol — backup and ransomware-recovery is the one enterprise-resilience lane no brand on the F1 grid has claimed. Worth 25 minutes to own it before the roadshow locks?"

FULL 2-PAGE BRIEF GENERATED, VERIFIED AND BRAND-LOCKED BY THE ENGINE — ATTACHED AS **COHESITY.PDF**.

Glean → Mahindra Racing

72/100 · WARM

THE SIGNAL

The enterprise "Work AI" leader: \$150M Series F at ~\$7.2B, ~\$300M ARR, 250M+ agentic actions, an acquisition already in 2026 — on a clear IPO trajectory, with no motorsport footprint.

WHY NOW

Scaling brand hard ahead of a listing, and the enterprise-AI lane in Formula E is **uncontested**. Category exclusivity is cheapest before a peer notices the open lane.

THE MATCH

Mahindra — a founding FE manufacturer committed to **Gen4 through 2030** — de-risks a multi-year deal, and its global enterprise parent group mirrors exactly the complex organisations Glean sells into.

DEAL ARCHITECTURE

Official Work AI Partner

TERM	3+ years (to Gen4)
VALUE	\$3–4M / yr
MODE	A — working deployment
DECISION-MAKER	Matt Kixmoeller, CMO
GRID FIT	PRIME — greenfield

"Kix — Formula E's enterprise-AI lane is wide open, and Mahindra's committed to 2030, so a multi-year deal is de-risked. You'd own the category before the IPO. 25 minutes?"

SAME ENGINE, SAME STANDARD — FORMULA E. FULL BRIEF ATTACHED AS **GLEAN.PDF**.

This isn't two briefs. It's a scored, live pipeline.

#	PROSPECT	SERIES	RECOMMENDED TEAM	SIGNAL	SCORE
1	Ramp	F1	Racing Bulls	\$750M raise · London race	87
2	JFrog	F1	McLaren	CMO who built McLaren–Udemy	86
3	Cohesity	F1	Cadillac	2026 IPO · greenfield lane	82
4	Quantinuum	F1	Aston Martin	\$12.7B IPO · new C-suite	76
5	1Password	FE	Andretti	2026 IPO lock	72
6	Glean	FE	Mahindra	\$7.2B · open AI lane	72
7	Plaid	FE	Jaguar TCS	new CMO · open-banking	71

Eleven scored prospects live now, each gated, team-matched and ready to verify on demand. The two proofs are simply the picks I'd walk into a room with first. *Team-side signals tracked too — e.g. the Alpine/BWT title slot expiring end-2026.*

The brief is step one. The destination is a deal-ready room.

Today the engine delivers the **signal**. The roadmap turns each signal into everything a partner needs to walk in and transact — so 1440 shows up not with a lead, but with the meeting already built.

NOW

The Signal

Verified 2-page brief: who, why now, which team, the opening angle.

NOW

The Match

Team-fit & category-whitespace check, conflict-flagged.

NEXT

Meeting-Ready

Decision-maker contact path, tailored outreach sequence, the deck to send.

NEXT

The Full Proposal

Activation plan, inventory, pricing model, valuation & the resourcing to deliver — a transaction-ready package, not just a tip.

"Clients don't only get a sales signal — they get the meeting and the resources to close it." That is the product. The engine is how we get there.

A mandate to run this as 1440's origination desk.

01

A defined role

Own the origination desk inside 1440 — the engine is the function, and I run it as a recognised revenue line, not a side project.

02

A small budget

To cover data/signal sources, verification and the build that turns the brief into the full meeting-ready proposal. Modest, and it pays for itself in partner hours saved.

03

A performance kicker

An override on any deal that closes from an engine-sourced brief. It costs nothing until the desk delivers revenue — and aligns me entirely with 1440 winning.

MEASURE ME ON TWO NUMBERS

Qualified briefs

verified, partner-ready, delivered

Meetings booked

for the partners, from those briefs

Low cost, plugs into how we already sell, no new headcount.

DAYS 0–30 · PROVE

- Run the desk live: one verified hero brief a day on the cadence.
- Point the engine at 3 prospects matched to 1440's warm teams (McLaren, Williams, Mahindra, Jaguar, Cadillac...).
- Land the first partner-led meeting from an engine brief.

DAYS 30–60 · BUILD THE NEXT RUNG

- Add the meeting-ready layer: contact paths, outreach sequences, the send-deck.
- Start outcome tracking — brief → meeting → deal — as our proof and our proprietary data.

DAYS 60–90 · SYSTEMATISE

- Stand up the full-proposal package on the strongest live opportunity.
- Review the two numbers; formalise the desk and the kicker.

THE BOTTOM LINE

1440 already has the relationships and the credibility to close. The desk gives us the throughput to feed them — qualified, verified, and ready — without adding people. **Let's run it for 90 days and let the two numbers decide.**
