

Honeywell Aerospace

Aerospace · Avionics, Propulsion & Electrification · Phoenix, Arizona · Nasdaq: HONA (regular-way from 29 Jun 2026; HONAV when-issued from 15 Jun)

Honeywell Aerospace, the \$17.4B-revenue avionics, engines and electrification supplier, becomes a standalone Nasdaq company on 29 June 2026: Honeywell's board set the 15 June record date on 5 June, and the separation gives one of aviation's biggest suppliers its own balance sheet, ticker and brand budget for the first time.

THE CASE

Honeywell announced on 5 June that its board has set 15 June 2026 as the record date for the spin-off of Honeywell Aerospace, with distribution on 29 June on a one-for-two basis; the shares trade when-issued as HONAV from around 15 June and regular-way on Nasdaq as HONA from 29 June. The business reported 2025 net sales of \$17.4B, up 12% organically, led by commercial aftermarket and defence. Headquartered in Phoenix, it is led by Jim Currier as President and CEO with Josh Jepsen as CFO, chaired by former Eaton chief Craig Arnold.

Aerospace is already on the grid: Boeing sits on the Alpine, Atlas Air on the Aston Martin, and Bombardier, a Honeywell customer, has left the Aston Martin roster. The engines-and-avionics tier has never taken a seat. That leaves a supplier-grade engineering story, from megawatt electric machines to thermal management, without a grid home just as Formula 1's new hybrid era begins and a British team starts its Honda power-unit years.

WHY NOW

Regular-way trading starts 29 June, the day after the Austrian GP; the British GP on 5 July is the company's first race weekend as an independent listing. A spin-off's first hundred days set its brand, and the marketing budget is now Honeywell Aerospace's own to spend.

BOTTOM LINE

A \$17.4B business listing on its own on 29 June, an open aerospace-engineering lane at Aston Martin and a British GP a week later give Honeywell Aerospace a clean brand-launch play. It scores 71: no marketing owner is named, the halo is B2B, and the power-unit rules limit what can run on the car.

WHY ASTON MARTIN ARAMCO F1 TEAM

Aston Martin is the one team where an aerospace supplier's story is already on the car: Aramco as title partner, Honda supplying the power unit from 2026, Atlas Air in the cargo-aviation lane, Arm and CoreWeave on compute. Bombardier's business-jet slot has departed, so the aerospace-engineering lane at Silverstone is open. Honeywell's 1-megawatt generator, about 97% efficient and usable as a motor, speaks to the hybrid era better than any consumer brand could.

VALUE TO ASTON MARTIN ARAMCO F1 TEAM — MODE B (TECH SERVES THE TEAM OPERATION)

MODE B - brand launch with an engineering exchange. The car carries the new company's name through its first hundred days as a listing; hospitality at the British GP and the US rounds hosts airline, defence and investor guests. Outside the regulated power unit, Honeywell's electrical-machine and thermal-management engineers work with the Silverstone campus on cooling and test rigs: aerospace-grade know-how for the team, a technical story for Honeywell.

DEAL ARCHITECTURE

Entry as Official Aerospace Technology Partner. **THREE YEARS**, 2027-2029, the company's first three years as a listed business. Estimated \$5-8M a year. Scope: sidepod placement, the engineering exchange above, hospitality at the British GP and the US rounds for airline, defence and investor guests.

PRIMARY DECISION-MAKER

James Currier
PRESIDENT & CEO, HONEYWELL AEROSPACE · **VERIFIED**

Currier, 60, has run Honeywell's aerospace business since August 2023 and led it into the spin-off. Path: Josh Jepsen, CFO since February 2026 (ex-Deere), and business-unit presidents Bob Buddecke, Dave Marinick and Rich DeGraff. No chief marketing officer is named in the spin-off filings.

OPENING ANGLE

Lead with the first race weekend as an independent company.

“Jim, Honeywell Aerospace trades on its own from 29 June and the British GP is its first race weekend as a listed company. Aston Martin's aerospace lane is open and the hybrid era needs your electrification story. 25 minutes before the record date?”

SCORE COMPOSITION

TIMING 17 / 20 Listing 29 Jun; British GP inside window.	CAPACITY 18 / 20 \$17.4B 2025 sales, 12% organic growth.	BRAND FIT 12 / 20 B2B and defence supplier; precision halo only.	URGENCY 13 / 20 Listing is a hard date; no marketing owner.	OPS FIT 11 / 20 Electrification adjacency; power-unit rules limit.

RISKS & COUNTERS

NO MARKETING OWNER No chief marketing officer is named in the Form 10 or the spin-off releases; no obvious sponsor sits below the CEO. **Counter:** Go straight to Currier with a spin-off brand-launch framing and ask who owns brand.

SUPPLIER, NOT SPONSOR No Honeywell Formula 1 sponsorship is on record, and the power unit is Honda's and homologated, so product cannot go on the car. **Counter:** Anchor on Boeing and Atlas Air as precedents and keep the workstream outside the regulated unit.
