

Odyssey

Physical AI · World Models / Real-Time Simulation · Palo Alto, California (offices in London and Zurich) · Private (\$310M Series B at \$1.45B, Jun 2026)

Odyssey, the Palo Alto world-model lab founded by the Voyage and Wayve autonomy veterans, closed a \$310M Series B at a \$1.45B valuation on 17 June 2026, led by Natural Capital with Amazon, AMD Ventures, GV, EQT and IQT, and named AWS its preferred cloud provider.

THE CASE

Odyssey announced on 17 June a \$310M Series B at a \$1.45B valuation, led by Natural Capital with Amazon, AMD Ventures, GV, EQT and IQT participating; total funding stands at \$337M (Crunchbase). NVentures had backed the Series A only in February. Founded in 2023 by Oliver Cameron, who founded Voyage and ran product at Cruise, and Jeff Hawke, formerly of Wayve, the company ships physics-accurate world models, Odyssey-2 Max and the real-time Starchild-1, through an API. AWS becomes its preferred cloud provider, with Trainium chips in the mix.

A world model is a simulator that learns physics from video and runs in real time. That is a tool for a race team's simulation group, not a chatbot, and it arrives in the year the grid has to learn a new car from scratch. Odyssey has a Zurich office on Hinwil's doorstep, a founding team fluent in vehicles, and a fresh \$310M that will be spent on being known to enterprise buyers.

WHY NOW

The round closed on 17 June; a lab that has just taken \$310M from Amazon, AMD and GV spends the next two quarters becoming visible to buyers. Audi's first season is the one moment a new technical partner gets an origin story, and 2027 rosters close in the fourth quarter.

BOTTOM LINE

A \$310M round at \$1.45B backed by Amazon, AMD and GV, an AWS compute deal, and a Zurich office beside Formula 1's newest works team put Odyssey at peak authority to sign a first sports partnership. The world-simulation lane at Audi is open, and the pilot is real engineering work.

WHY AUDI REVOLUT F1 TEAM

Audi enters Formula 1 in 2026 as a works team, chassis in Hinwil and power unit in Neuburg, with Revolut as title partner and a roster built from scratch: Extreme Networks, JigSpace, ElevenLabs and NinjaOne on the technology side. Nothing covers vehicle-dynamics or world simulation, a lane almost no team has branded. Additive Industries and Hewlett Packard Enterprise left within twelve months, so engineering slots are being re-let. A Zurich office suits a Hinwil team.

VALUE TO AUDI REVOLUT F1 TEAM — MODE A (TECH IN THE CAR / CHAMPIONSHIP)

MODE A - operational. Real-time, physics-accurate world models generate interactive track environments from video: new or resurfaced circuits for the driver-in-the-loop simulator before a laser scan exists, wet and low-light conditions on demand, synthetic footage to train the team's vision analytics. Audi's Hinwil simulation group trials the API under engineering supervision; Odyssey gets a named Formula 1 engineering reference for its enterprise sales.

DEAL ARCHITECTURE

Entry as Official World Simulation Partner. **THREE YEARS**, 2027-2029, spanning Audi's first regulation cycle. Estimated \$2-4M a year, part-payable in model access and compute. Scope: sidepod or halo placement, naming of the simulation programme, Hinwil engineering content, hospitality at Monza, Austin and Las Vegas.

PRIMARY DECISION-MAKER

Oliver Cameron

CO-FOUNDER & CEO, ODYSSEY · VERIFIED

Cameron founded Voyage, sold it to Cruise and ran product there; he fronts every Odyssey raise, and a first sports partnership is his call. Path: Jessica Inman, VP of GTM & Operations (commercial), and Jeff Hawke, Co-Founder & CTO (technical counterpart). No chief marketing officer or CFO is listed.

OPENING ANGLE

Lead with the simulator, not the logo.

“Oliver, your models learn physics from video and run in real time; Audi's Hinwil simulation group still builds its worlds by hand. You have a Zurich office and a fresh \$310M to be seen with. 25 minutes before Monza to walk through a pilot?”

SCORE COMPOSITION

TIMING 16 / 20 Round closed 17 Jun; summer shutdown sits inside the window.	CAPACITY 14 / 20 \$310M raise at \$1.45B; mid-tier; a team of about fifty.	BRAND FIT 13 / 20 Autonomy-born simulation lab; B2B, not yet a public name.	URGENCY 13 / 20 Go-to-market push after AWS deal; no hard deadline.	OPS FIT 14 / 20 MODE A pilot in simulation; unproven in a race team.
--	---	--	--	---

RISKS & COUNTERS

UNPROVEN IN A RACE TEAM No F1 team has used a generative world model in its simulator; Audi's engineers may see a research tool, not a product. **Counter:** Frame year one as a paid pilot with named deliverables; the partnership badge follows a working track environment.

SMALL TEAM, BIG ROUND About fifty people run a \$1.45B company; a sponsorship can outrun the bandwidth to activate it. **Counter:** Keep the scope narrow: one workstream, one hospitality calendar, model access in kind.
