

Snowflake

AI Data Cloud / Analytics Platform · Bozeman, MT · NYSE: SNOW (FY26 rev \$4.68B +33%; AI Cortex across 13,600+ accts)

Snowflake - the AI Data Cloud (FY26 revenue \$4.68B, Cortex across 13,600+ accounts) that powered Red Bull's data in 2019-20 before leaving - has a clean re-entry: the AI-data era is the reason to return to F1, bigger.

THE CASE

Snowflake (NYSE: SNOW), the AI Data Cloud, is at a reignited moment - FY26 revenue \$4.68B (+33%), the strongest sequential dollar growth in its history, with its Cortex and Snowflake Intelligence (agentic AI) layer embedded across 13,600+ accounts. Notably, Snowflake already proved the F1 use-case: it partnered Aston Martin Red Bull Racing in 2019-20 to drive data-based race decisions, then left after 2020. It is NOT currently on a grid, so this is a clean re-entry - and the AI-data/Cortex era is exactly the reason to return, bigger. The workstream is real and on-profile (data/AI deep-tech): ingesting race-weekend telemetry, running strategy and simulation analytics, and applying Cortex AI on a team's data - the kind of data brain that, under the cost cap, increasingly decides results. Decision-maker: CEO Sridhar Ramaswamy (ex-Neeva, ex-Google Ads SVP). HONEST: data/cloud is a saturated F1 category (VAST, Oracle, TWG, Mphasis, Extreme Networks), so this is positioned as a distinct, complementary AI-Data-Cloud lane at a team where it doesn't clash (Haas), not as clean whitespace.

WHY NOW

Snowflake's AI-data thesis has reignited (record growth, Cortex/Intelligence adoption), so brand investment and visibility are rising, and F1's cost-cap era rewards the team with the best data/analytics brain. Snowflake left F1 in 2020 before its AI-data products existed - returning now, with Cortex, is a stronger story than the original; engage while the re-entry narrative is fresh.

BOTTOM LINE

The AI Data Cloud at a reignited moment - FY26 revenue \$4.68B (+33%), Cortex/Snowflake Intelligence embedded across 13,600+ accounts. A REAL F1 workstream: the team's telemetry analytics, race-strategy data and AI brain - which Snowflake itself proved with Red Bull Racing in 2019-20 before leaving. The AI-data/Cortex era is the reason to RE-ENTER, bigger. On-profile (data/AI deep-tech), public, marquee. CEO Sridhar Ramaswamy (ex-Neeva/Google Ads).

NEW LEADERSHIP

DISCOVERY: SELF

WHY HAAS

Haas is the leanest team and gains the most from a turnkey AI Data Cloud (more analytics per cost-cap dollar). HONEST: Haas has an IT-services partner (Mphasis) and data/cloud is a contested category grid-wide - but Mphasis is apps/digital services, distinct from a data-warehouse/Cortex AI platform, so Snowflake's specific lane is defensibly open and complementary (verify against the current roster before any exclusivity claim).

VALUE TO HAAS — MODE A (TECH IN THE CAR / CHAMPIONSHIP)

MODE A with real mechanics. (1) TECHNICAL (the core): a team's edge under the cost cap is how fast it turns race-weekend telemetry and historical data into decisions - Snowflake's AI Data Cloud ingests and unifies that data, runs strategy/simulation analytics, and applies Cortex AI/agents for natural-language insight, a genuine, deployable data-brain workstream (one Snowflake has run in F1 before, with Red Bull). (2) COMMERCIAL / B2B: Snowflake sells to the enterprise data and analytics buyers who fill the F1 paddock, so hospitality becomes a working pipeline channel, while Haas gains a marquee, deep-pocketed data anchor. (3) BRAND / TALENT: 'the data cloud that makes the calls' is an ownable narrative on a data-driven sport, with a data/ML engineering-talent halo. Haas gets a transformative data platform and a blue-chip anchor; Snowflake gets a flagship live reference and a premium B2B stage for its AI-data story.

DEAL ARCHITECTURE

Official Data / AI-Cloud Partner on Haas, minimum three years, ~\$4-6M/yr, with category exclusivity in data cloud/analytics and a working deployment running the team's telemetry analytics, race-strategy data and Cortex AI.

PRIMARY DECISION-MAKER

Sridhar Ramaswamy
CEO, SNOWFLAKE - VERIFIED (EX-NEEVA CEO; EX-GOOGLE SVP ADS)
CEO since Feb 2024, an AI/data veteran (founded Neeva; ran Google Ads) driving Snowflake's AI-data and Cortex strategy - the owner of a brand-defining partnership and the entry point. Decision path: Ramaswamy (strategy/brand) with Snowflake's CMO/field-marketing leadership as activation counterpart; confirm the CMO before outreach.

OPENING ANGLE

"Sridhar - F1 under the cost cap is won by the team with the best data brain, and you proved it with Red Bull in 2019. Cortex makes the case far stronger now - Haas has an open data lane and gains the most. The data cloud that makes the calls. 25 minutes?"

SCORE COMPOSITION

TIMING 16 / 20 AI-data thesis reignited: FY26 revenue \$4.68B (+33%), strongest sequential dollar growth in company history, and Cortex/Snowflake Intelligence scaling fast - strong moment, though no discrete catalyst.	CAPACITY 18 / 20 ~\$4.68B revenue and a large-cap balance sheet - ample for a top-tier partnership.	BRAND FIT 16 / 20 A data/AI platform is core to a data-driven sport, and Snowflake proved the F1 use-case with Red Bull (2019-20); but data/cloud is partly present on the grid (VAST, Oracle, AWS), so not pristine.	URGENCY 13 / 20 The enterprise-AI-data race and a clean re-entry narrative create momentum, but no dated F1 trigger.	OPS FIT 16 / 20 MODE A: ingesting and analysing race-weekend telemetry, running strategy models and Cortex AI on a team's data is a genuine, deployable workstream - one Snowflake has literally run in F1 before.

RISKS & COUNTERS

DATA/CLOUD IS SATURATED ON THE GRID VAST (Williams), Oracle (Red Bull), TWG (Cadillac), Mphasis (Haas), Extreme Networks (Audi) all hold data/cloud-adjacent lanes - so this is a contested category, not clean whitespace. **Counter:** Position Snowflake's specific AI-Data-Cloud/Cortex platform lane (distinct from storage, networking and IT-services), at a team where it's complementary (Haas, where Mphasis is IT-services); do NOT claim category exclusivity - lead with the re-entry/analytics workstream. Verify the chosen team's roster before outreach.

PRIOR F1 DEAL CHURNED (2020) Snowflake left F1 after 2020, so a return must be justified. **Counter:** Frame as a stronger re-entry: the AI-data/Cortex era (which didn't exist in 2020) is the reason to come back, with a measurable analytics workstream - not a repeat of a logo deal.

DECISION-MAKER/CMO TO CONFIRM The brand owner isn't verified here. **Counter:** Anchor on the verified CEO and the strategic case; confirm the CMO before outreach rather than naming a generic title.
