

Infineon Technologies

Power Semiconductors · Silicon Carbide / EV Traction · Neubiberg, Germany (Americas HQ Milpitas, California) · FSE: IFX (EUR 14.7B revenue, FY2025)

Infineon, the world's number one power-semiconductor maker, raised guidance on 6 May 2026 as AI data-centre demand surged, then on 8 June put its silicon carbide into Siemens' circuit breakers. Formula E's 600 kW GEN4 car debuts in December; the one team that has run a power-semiconductor partner has none.

THE CASE

On 6 May 2026 Infineon reported second-quarter revenue of EUR 3.81B, up 6%, and raised fiscal 2026 guidance: revenue growing significantly, a segment result margin of about 20% and adjusted free cash flow of about EUR 1.65B, up from EUR 1.4B. AI data-centre revenue is expected at about EUR 1.5B this year and EUR 2.5B next. On 8 June it announced with Siemens that its silicon-carbide modules will sit inside Siemens' semiconductor circuit breakers. This is a EUR 14.7B, 57,000-person company at a demand peak, with a board-level chief marketing officer.

Silicon carbide lets an inverter switch faster and waste less, which in an electric race car is range and lap time. Jaguar first ran it in 2017 and made its US supplier Official Power Semiconductor Partner in 2023; that supplier went through Chapter 11 last year and is absent from the 2025/26 roster. GEN4 arrives in December with 600 kW, permanent all-wheel drive and 700 kW regeneration: the series' biggest power-electronics step.

WHY NOW

GEN4 debuts at the Jeddah E-Prix on 18-19 December 2026, the first season of a four-season era Jaguar has signed for. Season 13 partner rosters close in the autumn; a partner agreed before the London E-Prix in August is on the car for the first 600 kW race.

BOTTOM LINE

A EUR 14.7B power-semiconductor leader at peak demand, a board-level CMO, and the one Formula E team that has run a power-semiconductor partner now without one, five months before a 600 kW car arrives. Warm rather than hot: no capital event, but the lane and the calendar line up.

WHY JAGUAR TCS RACING

Jaguar TCS Racing carries TCS as title and technology partner, Castrol on fluids and Jaguar's own powertrain. There is no semiconductor or electronics brand on the roster. It is the team that proved silicon carbide in Formula E, has signed for the GEN4 era through Season 16, and whose parent JLR sells the road cars the technology transfers into. For a German company with an Americas base in California, a British works team racing in Austin and Miami is the stage.

VALUE TO JAGUAR TCS RACING — MODE A (TECH IN THE CAR / CHAMPIONSHIP)

MODE A - operational. GEN4 doubles the electrical workload: 600 kW across two motors, 700 kW regeneration, permanent all-wheel drive. Infineon supplies CoolSiC power modules and gate drivers for the traction inverters, application engineering on switching losses and cooling, and silicon carbide for the pit equipment. In return: Official Power Semiconductor Partner, inverter-cover and halo branding, Austin and Miami hospitality for Infineon's automotive and data-centre customers.

DEAL ARCHITECTURE

Entry as Official Power Semiconductor Partner. **THREE YEARS**, Seasons 13-15 (2026-2029), inside the GEN4 era. Estimated EUR 3-5M a year, part in components and engineering. Scope: inverter modules and support, halo and rear-wing branding, Austin, Miami and Berlin hospitality, technical content.

PRIMARY DECISION-MAKER

Andreas Urschitz
CHIEF MARKETING OFFICER, MEMBER OF THE MANAGEMENT BOARD, INFINEON · **VERIFIED**

Urschitz has sat on the Management Board as Chief Marketing Officer since 2022, with a mandate to 2030; brand and sponsorship are his call. Path: Jochen Hanebeck, CEO since 2022, and Sven Schneider, CFO since 2019. Infineon last bought motorsport with the Infineon Raceway naming rights, 2002-2012.

OPENING ANGLE

Lead with the empty lane.

“Andreas, Jaguar proved silicon carbide in Formula E and its power-semiconductor partner has gone. GEN4 is a 600 kW car in December and Infineon is number one in the material. 25 minutes before London to see the numbers?”

SCORE COMPOSITION

TIMING 15 / 20 Guidance raised 6 May; GEN4 debut in December; rosters close in autumn.	CAPACITY 18 / 20 EUR 14.7B revenue; free cash flow guidance about EUR 1.65B.	BRAND FIT 14 / 20 B2B component brand, but a board-level CMO and a raceway naming history.	URGENCY 12 / 20 No raise or listing; the GEN4 calendar is the only hard date.	OPS FIT 16 / 20 MODE A: CoolSiC modules for the GEN4 traction inverters.

RISKS & COUNTERS

ROAD-CAR SUPPLIER TENSION JLR contracted its road-car silicon carbide to Wolfspeed in 2022, and Infineon buys wafers from Wolfspeed. **Counter:** Position Infineon as the GEN4 racing partner, separate from road-car supply; the wafer link makes it familiar, not a rival.

NO SPORT SINCE 2012 Infineon has not bought a sports property since the raceway naming rights lapsed; appetite is unproven. **Counter:** Anchor on the engineering workstream and the CMO's board mandate; a component-level deal is cheaper than a circuit name.
