

Nexeon

Battery Materials · Silicon Anodes for Lithium-Ion Cells · Oxfordshire, UK (plant at Gunsan, South Korea) · Private (£100M round, Aug 2026)

Nexeon, the Oxfordshire silicon-anode company whose materials cut lithium-ion charging times, closed a £100 million round on 31 August with £52.6 million from the UK National Wealth Fund, alongside the Korea Development Bank and Honda Xcelerator Ventures – state money to scale a British battery business.

THE CASE

The National Wealth Fund committed £52.6 million on 31 August 2026, completing a £100 million round that also brought in the Korea Development Bank and Honda Xcelerator Ventures. Nexeon has raised roughly \$400 million since 2006. The money is for UK expansion and commercialisation, and it lands on a business that is already shipping: the world's first commercial-scale silicon anode plant, at Gunsan in South Korea next to OCI's monosilane supply, came online in December 2025 against a binding long-term agreement with Panasonic.

Silicon anodes raise energy density and cut charging time, which is the specification the electric-vehicle argument still turns on. A state investor putting money behind that in Britain is a policy statement as much as a financing, and policy statements want an audience. Nexeon has a Japanese engineering centre, a Korean plant and a British head office; what it does not yet have is a public face.

WHY NOW

The round closed on 31 August. Formula E's GEN4 era opens at the Jeddah E-Prix in December, and the London E-Prix moves to Brands Hatch next season, giving a British company a home round again. Partner tables settle before the opener.

BOTTOM LINE

A £100 million round with £52.6 million of UK state money behind it, a Korean plant already running and a Panasonic agreement signed, put Nexeon at the point where a British battery business has to become known. Jaguar TCS Racing has an open materials lane, and Britain gets its home round back at Brands Hatch.

WHY JAGUAR TCS RACING

Jaguar TCS Racing runs with TCS as title partner and Castrol alongside a Jaguar powertrain, and carries no battery, cell-chemistry or materials partner. Jaguar is one of the manufacturers committed to GEN4, so the engineering audience is a works one. British company, British team, and from next season a British home round at Brands Hatch. For a materials business that sells to cell makers and the carmakers behind them, that is the right room.

VALUE TO JAGUAR TCS RACING — MODE B (TECH SERVES THE TEAM OPERATION)

MODE B - halo, with concrete mechanics. Formula E's battery is a spec part, so Nexeon cannot supply the car and this brief will not pretend otherwise. What it can do: a named partnership on a works electric programme, garage and livery presence, hospitality for cell makers and carmakers at the Middle East and British rounds, joint fast-charge content with the team's engineers, and a recruiting platform for British battery talent.

DEAL ARCHITECTURE

Entry as Official Battery Materials Partner. **THREE YEARS**, Seasons 13-15, matching the GEN4 cycle and the ramp of the Gunsan plant. Estimated £0.8-1.5M a year, part-payable in engineering and content support. Scope: garage and sidepod placement, a technical-content series with the team, and hospitality at the European and Middle East rounds.

PRIMARY DECISION-MAKER

Dr Scott Brown
CHIEF EXECUTIVE OFFICER, NEXEON · **VERIFIED**

Brown has led Nexeon since June 2009 and has raised roughly \$400 million for it, so a first sports partnership is his call. Path: Tony Cochrane, Chief Commercial Officer, and David Lamb, Chief Financial Officer. No chief marketing officer is listed.

OPENING ANGLE

Lead with the home round, not the logo.

“Scott, the National Wealth Fund has just put £52.6 million behind a British battery business, and Formula E's British works team has an open materials lane the season its home round moves to Brands Hatch. 25 minutes?”

SCORE COMPOSITION

TIMING 17 / 20 Round closed 31 Aug; GEN4 opens in Jeddah in December.	CAPACITY 13 / 20 £100M raised, ~\$400M before it, but pre-profit and earmarked.	BRAND FIT 15 / 20 British battery story, British team, British home round.	URGENCY 12 / 20 No hard deadline beyond the Season 13 roster window.	OPS FIT 13 / 20 MODE B: the race battery is spec; value is audience, not parts.
---	---	--	--	---

RISKS & COUNTERS

THE RACE BATTERY IS A SPEC PART Formula E teams do not choose their cell chemistry, so a materials partner puts no component on the car and the technical story has to be told honestly. **Counter:** Sell the room, not the part: the paddock holds the cell makers and carmakers Nexeon needs in front of it.

THE MONEY IS EARMARKED A round led by a state investor is committed to UK expansion and commercialisation, so a sponsorship line competes with plant spend. **Counter:** Price at Formula E team rates and stage it, weighting year one to content and recruitment rather than rights.
