

Flex SpinCo (Cloud and Power Infrastructure)

Manufacturing/AI Infrastructure - Power & Thermal Management for Data Centers - Austin, TX · Austin, TX · NASDAQ: FLEX (parent; SpinCo unlisted pre-spin)

Flex Ltd. named leadership for its Cloud and Power Infrastructure spin-off on 29 July 2026 -- CEO Revathi Advaiti, CFO Kevin Krumm, COO Hooi Tan, CTO Chris Butler -- ahead of a Q1 CY2027 spin-off close. The new company inherits a grid-to-chip power and thermal management stack for AI data centers, built across 22 engineering centers.

THE CASE

Flex Ltd. named leadership for its Cloud and Power Infrastructure spin-off on 29 July 2026, targeting a Q1 CY2027 close. Parent Flex trades on NASDAQ as a multi-billion-dollar manufacturer, though SpinCo's standalone revenue remains undisclosed -- a capacity signal not yet independently confirmed. For a company engineering grid-to-chip power and thermal systems for AI data centers, this spin-off is the **BRAND RECKONING** moment: SpinCo must build an independent market identity before its debut, and motorsport is a proven stage for infrastructure brands doing exactly that.

No competitor in this power-and-thermal-infrastructure category has entered F1 sponsorship in the categories tracked. Grid power management, energy recovery and cooling remain open lanes as teams build 2026-regulation power-unit programs from scratch. The slot that matches SpinCo's grid-to-chip stack architecturally is open at Audi, where a new power-unit program is being built from the ground up.

WHY NOW

SpinCo's Q1 CY2027 close lands inside Audi's first full season build window, as the factory scales its from-scratch power-unit program ahead of the 2027 campaign. The 16-24 week decision horizon closes before SpinCo's board finalizes its own external-partner and brand strategy post-spin.

Aston Martin Aramco F1 Team	TAKEN	Honda, NetApp
Oracle Red Bull Racing	TAKEN	Ford

BOTTOM LINE

Flex's SpinCo just got a named CEO and a Q1 2027 clock; Audi is the only grid on the calendar building a power unit with no grid-to-chip thermal partner on the books -- move before SpinCo's own board sets external-brand strategy.

WHY AUDI

Audi enters F1 in 2026 building its power unit and technical-partner roster from zero -- there is no incumbent grid-to-chip power and thermal management partner on the books. SpinCo's engineering stack, spanning energy recovery, cooling and grid infrastructure, matches the exact systems Audi's factory must stand up in-house. A category-defining technical alliance here would anchor Audi's infrastructure story for its debut seasons, when the brand still has capacity to define the term.

VALUE TO AUDI — MODE A (TECH IN THE CAR / CHAMPIONSHIP)

SpinCo's grid-to-chip power and thermal stack maps directly onto Audi's power-unit build: factory cooling for the PU test bench, grid infrastructure for the engine facility, and energy-recovery-system engineering for the car itself. Deployment surface: factory power infrastructure, trackside energy management units, PU dyno cooling systems, and garage thermal monitoring feeding race-weekend strategy calls -- a live proving ground for AI-data-center thermal engineering applied to the highest-stress environment in motorsport.

DEAL ARCHITECTURE

A **THREE YEARS** entry-tier technical partnership, structured around Audi's power-unit ramp, gives SpinCo grid-to-chip branding across factory, pit-wall and trackside energy systems at a proposed entry-tier annual rate. Anchor moments: the United States Grand Prix in SpinCo's home city of Austin, and the Las Vegas Grand Prix, both natural stages for an AI-infrastructure power brand.

PRIMARY DECISION-MAKER

Revathi Advaiti

INCOMING CEO, SPINCO (FLEX CLOUD & POWER INFRASTRUCTURE SPIN-OFF) · **VERIFIED**

Revathi Advaiti is set to lead SpinCo as CEO following the spin-off's Q1 CY2027 close. She currently serves as CEO of Flex Ltd., the NASDAQ-listed parent, where she has overseen the company's manufacturing and infrastructure portfolio ahead of this planned separation.

OPENING ANGLE

Flex just named the CEO of a power-infrastructure spin-off built for AI data centers and F1-grade cooling.

“Audi is building a power unit from scratch with no grid-to-chip thermal partner on the books, and SpinCo's stack was engineered for exactly this load profile -- can we book 25 minutes?”

SCORE COMPOSITION

TIMING 12 / 20 Capacity signal not fully confirmed	CAPACITY 8 / 20 SpinCo revenue/valuation undisclosed pre-spin	BRAND FIT 16 / 20 Grid-to-chip stack matches PU needs	URGENCY 16 / 20 16-24 week window before board sets strategy	OPS FIT 18 / 20 Direct power/thermal/cooling engineering overlap with PU build
---	--	--	---	---

RISKS & COUNTERS

CAPACITY UNVERIFIED SpinCo's standalone revenue and budget authority remain undisclosed pre-spin. **Counter:** Structure entry-tier deal with financial confirmation gate before Q1 2027 close.

TIMELINE SLIPPAGE Spin-off close could slip past Q1 CY2027 target, delaying brand-budget authority. **Counter:** Anchor contract signature to post-close date, protecting both sides from pre-spin uncertainty.
