

Quantinuum

Quantum Computing · Trapped-Ion Systems · Broomfield, Colorado (European HQ Cambridge, UK) · Nasdaq: QNT (IPO 4 Jun 2026; ~\$15B reported)

Quantinuum, the Honeywell-controlled trapped-ion quantum computer maker formed from Honeywell Quantum Solutions and Cambridge Quantum, priced an upsized IPO at \$60 a share and began trading on Nasdaq as QNT on 4 June 2026, raising \$1.68B in one of the largest quantum-computing listings to date.

THE CASE

Quantinuum sold 28 million Class A shares at \$60, above the \$53-55 range, raising \$1.68B; J.P. Morgan and Morgan Stanley led the books and the shares opened on Nasdaq on 4 June, closing flat on debut. Reports put the valuation at roughly \$15B, up from the \$10B pre-money at which Honeywell led a \$600M raise in September 2025. The S-1 shows the scale of the bet: 2025 revenue of \$30.9M, bookings of \$79.3M and a net loss of \$192.6M, with Honeywell keeping about 48% of the voting power. Quantum has no seat on the grid, but its rivals do: IBM sits on the Ferrari, Google Cloud on the McLaren, Microsoft on the Mercedes and the Alpine, Oracle on the Red Bull. Each parent runs a quantum programme that would block a Quantinuum deal. That leaves a shortlist, and one roster that already reads as a compute stack, from Arm processors to CoreWeave's AI cloud, with the quantum layer missing.

WHY NOW

The shares have traded since 4 June; a newly listed company sets its brand budget in its first two quarters, when investors, customers and recruits are all watching. The British GP on 5 July, Aston Martin's home race, falls inside the window, and teams close 2027 rosters in the fourth quarter.

BOTTOM LINE

A \$1.68B IPO at roughly \$15B, Honeywell's backing and a grid where every quantum rival is locked to another team give Quantinuum a clean lane at Aston Martin, whose roster already reads as a compute stack. Revenue of \$30.9M against a \$192.6M loss is what holds the score back.

WHY ASTON MARTIN ARAMCO F1 TEAM

Aston Martin Aramco's roster is built like a compute stack: Arm on processors, CoreWeave as Official AI Cloud Computing Partner, NetApp on data infrastructure, Cognizant and ServiceNow on the enterprise layer and Cognition for AI software engineering. No quantum company sits on it, or on any other car. Quantinuum's European headquarters in Cambridge is close to the Silverstone campus; the Colorado headquarters and the Nasdaq ticker give the US rounds a story too.

VALUE TO ASTON MARTIN ARAMCO F1 TEAM — MODE A (TECH IN THE CAR / CHAMPIONSHIP)

MODE A - exploratory research. Two workstreams the team's engineers could run on Helios: combinatorial optimisation for race-strategy and freight scheduling, benchmarked against the classical solvers the team uses today, and InQuanto chemistry simulation of battery and fuel materials for the hybrid power unit. Results are research-grade and published jointly. In return: Official Quantum Computing Partner status, livery presence and British GP hospitality.

DEAL ARCHITECTURE

Entry as Official Quantum Computing Partner. **THREE YEARS**, 2027-2029, spanning the company's first three years as a listed business and the Sol system due in 2027. Estimated \$3-5M a year, part-payable in compute access on Helios. Scope: engine-cover or sidepod placement, a joint research programme, British GP and US-round hospitality, engineering content.

PRIMARY DECISION-MAKER

Rajeeb Hazra
PRESIDENT & CEO, QUANTINUUM · **VERIFIED**

Hazra leads Quantinuum after 25 years at Intel and a compute-and-networking role at Micron, and fronted the IPO. Path: Nitesh Sharan, CFO since April 2026 (ex-SoundHound AI), and chairman Vimal Kapur, Honeywell's chairman and CEO. No chief marketing officer is confirmed.

OPENING ANGLE

Lead with the compute-stack gap.

“Raj, Aston Martin's roster runs from Arm to CoreWeave and stops short of quantum; no team on the grid has that layer. You have just listed and the British GP is four weeks out. 25 minutes to see how the seat would work?”

SCORE COMPOSITION

TIMING 17 / 20 Listed 4 Jun; British GP inside window.	CAPACITY 17 / 20 \$1.68B raised; ~\$15B reported; \$30.9M revenue.	BRAND FIT 14 / 20 Precision deep-tech; B2B, investor-facing.	URGENCY 13 / 20 Post-IPO brand build; no hard deadline.	OPS FIT 12 / 20 MODE A exploratory: optimisation, chemistry.

RISKS & COUNTERS

REVENUE VERSUS VALUATION 2025 revenue of \$30.9M against a \$192.6M loss and a valuation near \$15B; a sponsorship will be read against that gap. **Counter:** Keep the cash component small, pay partly in Helios access, and frame it as research with published output.

RESEARCH, NOT OPERATIONS No quantum system beats classical solvers on race problems today; an operational claim would be an overclaim. **Counter:** Label the workstream exploratory from day one and set milestones the team's engineers own.
