

Gatik

Autonomous Freight · Middle-Mile Driverless Trucking · Santa Clara, California · Private (\$200M Series D, Aug 2026)

Gatik announced a \$200M Series D on 25 August, co-led by the Qatar Investment Authority and Koch Disruptive Technologies, on more than \$600M of contracted driverless freight. A direct peer already runs on a Formula 1 car; no Formula E team carries an autonomy partner.

THE CASE

Gatik announced \$200M of Series D financing from Santa Clara on 25 August, co-led by the Qatar Investment Authority and Koch Disruptive Technologies, with Millennium Management, ARK Invest and Intact Private Capital following. The company reports more than \$600M of contracted revenue, 85,000 completed fully driverless orders and 99% on-time delivery, moving ambient, refrigerated and frozen goods between distribution centres and stores for Walmart, Kroger and PepsiCo. It is targeting more than 100 driverless trucks by the end of 2026.

Motorsport has priced this category once already. In November 2024 Zoox, Amazon's robotaxi business, became an Official Regional Partner of Atlassian Williams Racing in Formula 1's first autonomous-vehicle partnership, running on the car at that team's American races. It answers the obvious objection - that a safety-first autonomy company has no business in racing - because a direct peer made the argument first, and won it.

WHY NOW

The Series D landed on 25 August and category budgets are written in the quarter after a raise. Formula E teams close Season 13 rosters this autumn; the season opens at the Jeddah E-Prix in December, and the Austin E-Prix and the Miami E-Prix follow in February 2027.

BOTTOM LINE

A \$200M Series D on 25 August, more than \$600M of contracted revenue and a direct peer already running on a Formula 1 car put Gatik at the moment an autonomy brand decides whether to become visible. Formula E has never sold an autonomy seat, and the Lola Yamaha ABT roster carries no technology partner at all.

WHY LOLA YAMAHA ABT

The sponsor table records no autonomy, software or data partner anywhere on the Formula E grid, and Lola Yamaha ABT carries the thinnest technology roster on it: Castore, OMP and Shell beside the Lola Cars, Yamaha and ABT Sportsline parents. An autonomous-technology designation would be a first there, not a slot. Yamaha's Japanese engineering base sits alongside Gatik's Isuzu alliance rather than against it, and Season 13 finishes in Tokyo.

VALUE TO LOLA YAMAHA ABT — MODE B (TECH SERVES THE TEAM OPERATION)

MODE B - halo, said plainly: no race team will run a driverless-freight stack. What the team gets is its first technology partner and a naming lane it has never sold; a content strand pairing constructor engineering with autonomy; hospitality at the Austin, Miami and Tokyo rounds for Walmart, Kroger and PepsiCo buyers and for QIA, Koch and ARK; and a recruiting channel into perception and controls engineering.

DEAL ARCHITECTURE

Entry as Official Autonomous Technology Partner. **THREE YEARS**, Seasons 13-15, running to the Isuzu mass-production launch. Estimated \$1.5-3M a year. Scope: sidepod and halo placement, naming rights on the team's data and simulation programme, US and Tokyo hospitality, joint engineering content.

PRIMARY DECISION-MAKER

Gautam Narang
CEO & CO-FOUNDER, GATIK · **VERIFIED**

Narang co-founded Gatik with Arjun Narang and Apeksha Kumavat and fronts every raise; a first sports partnership is his call. Path: Paul Dilauro, chief commercial officer, who owns commercial spend, and Patrick Archambault, chief financial officer. No chief marketing officer is listed.

OPENING ANGLE

Lead with Zoox, not with the trucks.

“Gautam, Zoox took Formula 1’s first autonomous-vehicle seat at Williams in 2024. No Formula E team has sold one yet and it costs a fraction of that. 25 minutes to look at the Lola Yamaha ABT numbers?”

SCORE COMPOSITION

TIMING 17 / 20 Round announced 25 Aug; Season 13 rosters close this autumn.	CAPACITY 16 / 20 \$200M Series D on \$600M+ of contracted revenue; QIA and Koch behind it.	BRAND FIT 14 / 20 Zoos proves the category buys racing; the buyer is still a supply-chain VP.	URGENCY 12 / 20 No deadline; the 2027 Isuzu launch is the only clock.	OPS FIT 12 / 20 MODE B: a designation and a stage, not a team workstream.
---	--	---	---	---

RISKS & COUNTERS

OFF-BRAND RISK A driverless-freight company's proposition is that its trucks are unexciting and safe. Racing says the opposite, and no autonomy peer but Zoos has bought motorsport. **Counter:** Zoos answered it in Formula 1. Buy the engineering story - perception, simulation, validation - and activate at the rounds where the customers already are.

THE MONEY IS SPOKEN FOR The \$200M was raised to put 100+ driverless trucks on the road by the end of 2026 and reach mass production with Isuzu in 2027, not to buy brand. **Counter:** Formula E prices the designation at a fraction of Formula 1, and a three-year term spreads it across the production ramp.
