

Nebius Group

AI Cloud / GPU Compute Infrastructure · Amsterdam, Netherlands · NASDAQ: NBIS (2026 rev guide \$3-3.4B; ~\$50B backlog; NVIDIA-backed)

Nebius - the breakout AI-cloud (Q1'26 revenue +684%, ~\$50B backlog, \$2B NVIDIA investment) - has never been in motorsport, and GPU compute is the cost-cap-era battleground that decides F1 performance.

THE CASE

Nebius Group (NASDAQ: NBIS), the AI-native cloud built by Yandex founder Arkady Volozh, is one of the breakout AI-infrastructure platforms: Q1'26 revenue grew 684% YoY to \$399M, 2026 guidance is \$3-3.4B at ~40% EBITDA margin, it holds a ~\$50B contracted backlog, and NVIDIA has taken a \$2B strategic equity stake. It has never entered motorsport. The fit is real and on-profile (AI compute/data-center): under F1's cost cap, performance is increasingly decided by CFD, simulation and AI - compute efficiency converts to lap time - so a GPU-cloud partner powers the team's most decisive workstream. CoreWeave's Aston Martin deal proves AI-clouds sponsor F1; the open whitespace is at a peer team. Haas - the leanest team, which outsources design and gains the most from democratised high-end compute - is the ownable first step. Decision-maker: CEO Arkady Volozh.

WHY NOW

Nebius is at the crest of the AI-infrastructure supercycle (NVIDIA's \$2B stake, hyper-growth, a \$50B backlog), so brand investment and visibility are peaking, and F1's 2026 compute-driven era makes a GPU-cloud partner unusually on-message. CoreWeave just validated the category in F1 - move before another neocloud claims the remaining peer-team whitespace.

BOTTOM LINE

One of the breakout AI-cloud platforms - Q1'26 revenue up 684% to \$399M, 2026 guidance \$3-3.4B, a ~\$50B contracted backlog and a \$2B NVIDIA equity investment. AI compute is a REAL F1 workstream: CFD, simulation and AI are the cost-cap-era battleground, and a GPU-cloud partner powers exactly that. CoreWeave (Aston) proves the category sponsors F1, so the lane is proven and the peer-team whitespace is open. CEO Arkady Volozh (built Yandex). On-profile (AI compute/data-center).

NEVER ENTEREDFUNDING EVENTCATEGORY WHITESPACEDISCOVERY: SELF

WHY HAAS

Haas is the grid's leanest team and outsources much of its design (Dallara), so cloud-based CFD/AI compute is genuinely transformative rather than incremental - and its compute/cloud lane is open. An American team plus a fast-scaling global AI-cloud is a clean story, with a clear scale-up path if it performs.

VALUE TO HAAS — MODE A (TECH IN THE CAR / CHAMPIONSHIP)

MODE A with real mechanics. (1) TECHNICAL (the core): F1 performance under the cost cap is won in CFD, vehicle-dynamics simulation and AI, and Nebius's GPU/AI cloud powers exactly those workloads - more simulation throughput per cost-cap dollar, faster design iteration, and AI/ML tooling - a genuine, deployable competitive workstream, especially for a lean team like Haas that can leapfrog on elastic compute. (2) COMMERCIAL / B2B: Nebius sells to the enterprises and AI builders who populate the F1 paddock and its NVIDIA-anchored ecosystem, so hospitality becomes a working channel, while Haas gains a fast-scaling, deep-pocketed technology anchor. (3) BRAND / TALENT: 'the compute that designs the car' is an ownable narrative on a data-driven sport, with an ML/HPC engineering-talent halo. Haas gets transformative compute and a blue-chip anchor; Nebius gets a live, visible reference and a premium B2B stage at its peak.

DEAL ARCHITECTURE

Official AI-Cloud / Compute Partner on Haas, minimum three years, ~\$4-6M/yr, with category exclusivity in AI cloud/GPU compute and a real deployment powering the team's CFD, simulation and AI workloads.

PRIMARY DECISION-MAKER

Arkady Volozh

FOUNDER & CEO, NEBIUS GROUP - VERIFIED (FOUNDER OF YANDEX)

Founder and CEO, who built Yandex into a global infrastructure company - the owner of a strategic, brand-defining partnership at this stage and the entry point. Decision path: Volozh (strategy/brand) with Nebius's commercial/marketing leadership as the activation counterpart; confirm the CMO/CRO before outreach.

OPENING ANGLE

"Arkady - under F1's cost cap, the team that wins is the team that simulates most per dollar, and that's GPU compute. CoreWeave just proved AI-cloud belongs in F1; Haas's compute lane is open and it gains the most. The compute that designs the car. 25 minutes?"

SCORE COMPOSITION

TIMING

18 / 20

Peak moment: Q1'26 revenue +684% YoY to \$399M, 2026 guidance \$3-3.4B at ~40% EBITDA margin, a ~\$50B contracted backlog, and a fresh \$2B NVIDIA equity investment - capital and visibility are cresting.

CAPACITY

18 / 20

Hyper-scaling AI-cloud with NVIDIA's \$2B equity and a multi-billion revenue trajectory - capacity is ample for a top-tier partnership.

BRAND FIT

16 / 20

AI compute is core to F1's cost-cap-era edge (CFD/sim/AI), and CoreWeave-at-Aston proves the category sponsors F1 - though compute/cloud is present at several top teams, so the open whitespace is at a peer team.

URGENCY

14 / 20

The AI-infrastructure land-grab and F1's compute-driven 2026 era create momentum, but no single dated F1 trigger.

OPS FIT

16 / 20

MODE A: GPU/AI cloud powers a team's CFD, simulation and AI workloads - under the cost cap, compute efficiency converts directly to lap time - a genuine, deployable workstream.

RISKS & COUNTERS

COMPUTE PRESENT AT TOP TEAMS CoreWeave (Aston), Oracle (Red Bull), Dell/Google (McLaren) already hold cloud/compute lanes. **Counter:** Target the open peer-team whitespace (Haas), where cloud/compute is unclaimed and the lean team benefits most - not a contested top-team lane.

HYPER-GROWTH FOCUS A company scaling this fast prioritises capacity build-out over sponsorship. **Counter:** Frame as a flagship reference deployment at peak visibility (and a B2B-pipeline channel), right-sized to a real compute workstream.

DECISION-MAKER/CMO TO CONFIRM The brand/commercial owner isn't verified here. **Counter:** Anchor on the verified founder-CEO and the strategic case; confirm the CMO/CRO before outreach rather than naming a generic title.
