

DSV

Logistics / Freight Forwarding · Hedehusene, Denmark · CPH; DSV (world's #1-2 freight forwarder post-DB Schenker; ~EUR41.6B revenue)

DSV - the world's largest freight forwarder after the ~EUR14.3B DB Schenker takeover - has never been in F1/FE, and for a new team building global operations it is a real logistics workstream with a 'dethrone DHL' story, not a logo.

THE CASE

DSV, the Danish logistics group, completed its ~EUR14.3B acquisition of DB Schenker (integrating through 2028) to become the world's #1-2 freight forwarder - ~EUR41.6B revenue, ~160,000 people, 90+ countries. It surfaced on the MD's 8-Jul Prospect Radar, in the logistics whitespace that opens up now that AI and fintech categories are effectively sold out across the grid. The operational fit is genuine, not a halo: motorsport is fundamentally a global freight operation (logistics is the single biggest source of the sport's carbon footprint per F1's own reporting), and freight forwarders already sit at team level (DP World at McLaren, CEVA at Ferrari; DHL holds the F1 series deal). DSV's only motorsport tie so far is regional - Official Logistics Partner of Porsche Motorsport North America (Feb 2026), a Carrera Cup sportscar deal - so it is clean for an F1 team and that deal proves appetite to step up. HONEST framing: this is an operational/off-car partnership (freight + sustainable-freight decarbonisation), not in-car tech, and the Schenker integration is a multi-year effort - scored accordingly. Verified decision-maker: Group CEO Jens H. Lund (confirm the group marketing/sponsorship lead before outreach).

WHY NOW

DSV has just become the world's largest forwarder (Schenker close), which is exactly the identity moment when a company invests in a global brand platform, and it has just proven motorsport appetite (Porsche NA). Cadillac's clean-sheet team-build and open inventory (title + operational slots) make now the window to claim the logistics position before a rival forwarder does. The honest why-now is inflection- and land-grab-driven, not a dated race trigger.

DHL

F1 series logistics is held by a rival (the 'dethrone DHL' story)

GRID FIT — CATEGORY-WHITESPACE CHECK ACROSS THE F1 GRID (1440 TEAM-FIT ENGINE)

Cadillac	PRIME LANE	greenfield entry — partner roster being built from zero
McLaren	OPEN	no rival in this category lane
Red Bull Racing	OPEN	no rival in this category lane
Williams	OPEN	no rival in this category lane

BOTTOM LINE

The world's #1-2 freight forwarder after the ~EUR14.3B DB Schenker takeover (~EUR41.6B revenue, ~160,000 people, 90+ countries) - a born-big identity inflection that just made it the industry's largest. Sourced from the MD's Prospect Radar; logistics is genuine whitespace (AI/fintech sold out). REAL operational workstream: motorsport is fundamentally a global freight operation and logistics is the sport's single biggest carbon category, so a freight forwarder integrates into team operations (as DP World does at McLaren, CEVA at Ferrari) - not a livery logo. Clean for F1/FE (its only motorsport deal is regional: Porsche Motorsport NA sportscar, Feb 2026 - which also proves appetite). Group CEO Jens H. Lund.

WHY CADILLAC

Cadillac is the new, US-owned works team building its global race-and-factory logistics from zero, so a freight forwarder is a foundational operational partner (a genuine prime lane), and its US base aligns with DSV's US enterprise-growth pipeline and the Miami/Austin/Vegas hospitality DSV wants. No freight partner to conflict with (DP World=McLaren and CEVA=Ferrari are the taken team slots; DHL is series-level). It is a signal, not a placement - Cadillac's greenfield build is simply the best logistics fit (Williams and Aston Martin are the strong alternates, both with open freight lanes).

VALUE TO CADILLAC — MODE A (TECH IN THE CAR / CHAMPIONSHIP)

A TWO-WAY exchange (business both directions), not a logo fee - three concrete swaps. (1) GLOBAL FREIGHT <-> MARQUEE STAGE: DSV runs the team's end-to-end global race-and-factory logistics (the integrated DP World-McLaren model) and de-risks the most logistically complex sport for a new team scaling worldwide; in return the team gives DSV the biggest global B2B stage and the 'world's largest forwarder, on the grid' brand moment against DHL. (2) SUSTAINABLE-FREIGHT DECARBONISATION <-> ESG STORY: DSV's biofuel fleet and carbon-optimised freight cut the team's single biggest carbon category (logistics) with auditable data for FIA / Net-Zero reporting; the team gives DSV a visible sustainability-leadership platform. (3) US ENTERPRISE PIPELINE <-> CLIENT ECOSYSTEM: the team's US races and hospitality open DSV's US enterprise-growth pipeline, while DSV's 90-country automotive/industrial client network becomes a B2B ecosystem the team can activate. Cadillac gets a foundational logistics operation + a decarbonisation story; DSV gets a global stage, US growth and a dethrone-DHL narrative.

DEAL ARCHITECTURE

Official Logistics / Freight Partner on Cadillac, minimum three years, multi-million (DSV is deeply deal-capable), structured as an integrated race-and-factory freight workstream + a sustainable-freight (biofuel fleet) decarbonisation programme with reported carbon data - value exchanged both ways, not a pure livery fee. A title-level conversation is credible given Cadillac's open ~\$30-40M title ask.

PRIMARY DECISION-MAKER

Jens H. Lund
GROUP CEO, DSV - VERIFIED (SINCE FEB 2024)

Group CEO of DSV since February 2024 (previously Group COO/Vice-CEO and long-time CFO) - the executive owner of a group-brand decision of this scale and the entry point. Decision path: Lund as executive sponsor with the group marketing/communications leadership owning sponsorship - confirm the named marketing lead before outreach.

OPENING ANGLE

"Jens - you're now the world's largest freight forwarder, motorsport is one giant global freight operation, and DHL - your rival - runs F1's series logistics. Cadillac is building its global operation from zero and needs a freight partner. That's their operation and your stage, with a sustainable-freight story on top. 25 minutes?"

SCORE COMPOSITION

TIMING 16 / 20 Just completed the ~EUR14.3B DB Schenker acquisition (integrating through 2028) to become the world's largest forwarder - a born-big identity inflection - and took its first motorsport deal (Porsche Motorsport NA, Feb 2026), signalling appetite to step up.	CAPACITY 18 / 20 ~EUR41.6B revenue and the #1-2 global position - among the deepest balance sheets in the whole prospect set; a multi-year, multi-million commitment is trivially within reach.	BRAND FIT 16 / 20 Motorsport is a global freight operation and logistics is the sport's single biggest carbon category, so the fit is operational and real, plus a sharp 'world's largest forwarder vs DHL (F1's own series partner)' narrative; logistics is genuine grid whitespace.	URGENCY 13 / 20 Cadillac's team-build and open inventory create a now-window, but there is no single dated F1 trigger and the Schenker integration is a multi-year effort.	OPS FIT 15 / 20 MODE A (operational): a freight forwarder is deployed in the team's actual global race-and-factory logistics (the DP World-McLaren / CEVA-Ferrari model) plus a sustainable-freight decarbonisation workstream - real integration, not badging, though off-car.
--	--	---	---	--

RISKS & COUNTERS

OPERATIONAL / OFF-CAR (NOT IN-CAR TECH) Freight is a team-operations partnership, not performance technology on the car. **Counter:** Score and pitch it honestly as a real operational + decarbonisation workstream (the DP World / CEVA model), not badging - the integration and the carbon story are the substance.

ALREADY ACTIVE IN MOTORSPORT (PORSCHE NA) DSV is Porsche Motorsport NA's logistics partner, so inbound interest is higher and there is a Porsche relationship. **Counter:** That is regional sportscar (Carrera Cup NA), not F1/FE, and proves appetite; an F1 deal is net-new. Porsche isn't in F1, so no conflict for a Cadillac deal; confirm CRM saturation before approach.

INTEGRATION DISTRACTION The DB Schenker integration runs to 2028 and could absorb management focus. **Counter:** A global brand platform supports the newly-combined identity; right-size the launch and tie activation to the integration's US/brand milestones.
