

Vertiv

Critical Digital Infrastructure — Power & Thermal/Cooling · Westerville, OH · NYSE: VRT (~\$2.65B Q1'26 sales; \$15.0B backlog; +102% YTD)

Vertiv - the AI-power-supercycle winner (Q1'26 sales \$2.65B, a \$15.0B backlog up 109%, stock +102% YTD, NVIDIA partner) - has never been in motorsport, and power + cooling + edge infrastructure is a real workstream for a data-driven F1 team in its 2026 electric era.

THE CASE

Vertiv (NYSE: VRT) is the critical-digital-infrastructure leader - power continuity, precision cooling/thermal management and edge systems - and the clearest pick-and-shovel winner of the AI-data-centre buildout: Q1 2026 net sales of \$2.65B (up 30%), a backlog of \$15.0B (up 109% year-on-year), a stock up 102% year-to-date, an NVIDIA partner, and a just-completed acquisition of thermal specialist ThermoKey (12 Jun 2026) led by CEO Giordano Albertazzi. It has never touched motorsport. The fit matches the recalibrated 1440 profile precisely - a public, electrification/power-backbone company (the Versigent/nVent thread) with a genuine technical workstream, not a halo: a modern F1 team runs on compute (CFD, simulation, factory and trackside data), and Vertiv builds exactly the power and cooling that compute depends on. The why-now is sharp: F1's 2026 power units are ~50% electric and the sport's data/compute arms race is intensifying, while Cadillac - the brand-new 2026 entrant - is building its entire digital backbone from zero, with an open critical-infrastructure lane (IFS runs its ERP, TWG its AI, Tenneco its powertrain - none is power/cooling).

WHY NOW

Vertiv is at the crest of the AI-power supercycle - record sales, a \$15.0B backlog and a stock up 102% YTD - so the capital and the appetite to build enterprise brand are peaking together, exactly the inflection moment 1440 targets. F1's 2026 electrification regs and the sport's escalating compute/data demands make a power-and-cooling partner unusually on-message right now, and Cadillac's greenfield build means the infrastructure decisions are being made today - get in before the backbone is architected, not after.

BOTTOM LINE

The pick-and-shovel winner of the AI-power supercycle - power + thermal/cooling + edge infrastructure - at its peak moment (\$2.65B Q1'26 sales +30%, a \$15.0B backlog up 109%, stock +102% YTD, NVIDIA partner, fresh ThermoKey thermal acquisition). Fits the recalibrated profile exactly: a public electrification/power-backbone leader with a REAL motorsport workstream (powering and cooling a team's compute), and F1's 2026 ~50%-electric era is the why-now. Cadillac, the greenfield 2026 entrant, has an open critical-infrastructure lane to build from zero.

WHY CADILLAC F1 TEAM

Cadillac is the 2026 grid's only greenfield team - building its factory, data and trackside infrastructure from scratch - so Vertiv can architect the power-and-cooling backbone from day one rather than retrofit, a uniquely concrete workstream. The critical-infrastructure lane is open (IFS = ERP, TWG = AI, Tenneco = powertrain), and an American critical-infrastructure champion on the American flag-bearer team is a clean brand story for Vertiv's US-heavy investor and customer base.

VALUE TO CADILLAC F1 TEAM — MODE A (TECH IN THE CAR / CHAMPIONSHIP)

MODE A with real, named mechanics. (1) TECHNICAL / OPS (the core): Vertiv designs and operates the power continuity (UPS/switchgear), precision cooling and thermal management, and edge/data-centre infrastructure that a modern F1 team's compute runs on - the factory CFD/simulation clusters and data centre, plus the trackside 'garage' edge where race-weekend power conditioning and cooling for compute and comms simply cannot drop mid-session. For Cadillac, a brand-new team, Vertiv can architect that entire digital backbone from day one (factory + trackside + edge) as a flagship 'the power and cooling behind the newest team on the grid' reference, with its fresh ThermoKey thermal expertise mapping onto the team's own cooling-engineering culture. (2) COMMERCIAL / B2B: Vertiv sells to the hyperscalers, enterprises and data-centre operators building AI infrastructure, and the F1 paddock is dense with exactly those CIO/CTO/infrastructure buyers and the AI/cloud ecosystem (NVIDIA among them) - so team hospitality becomes a working enterprise channel, while Cadillac gains a marquee, deep-pocketed technology anchor at the company's peak-visibility moment. (3) BRAND / CONTENT / TALENT: 'the power and cooling behind the data that wins races' ties Vertiv to the hottest tech story of 2026 (AI power) on a data-driven sport, with a co-marketing content series and a power/thermal/electrical engineering-talent halo both sides compete for. Cadillac gets its digital backbone built and a blue-chip anchor partner; Vertiv gets a live, visible reference deployment and a premium B2B stage at its peak.

DEAL ARCHITECTURE

Official Critical Infrastructure (Power & Cooling) Partner on the Cadillac F1 Team, minimum three years, ~\$5-8M/yr (large-cap capacity), with category exclusivity in power/cooling/critical-digital-infrastructure and a real deployment powering and cooling the team's factory, data and trackside compute.

PRIMARY DECISION-MAKER

Giordano Albertazzi
CEO, VERTIV - VERIFIED (CONFIRM CMO/BRAND LEAD BEFORE OUTREACH)

Chief Executive, leading Vertiv through its AI-power-driven surge and the owner of a strategic, brand-defining partnership at this scale. A sponsorship of this nature would be championed at C-level and executed by the marketing organisation - route via the CEO/CMO office, and confirm the current CMO/brand lead before outreach (named here is the verified CEO).

OPENING ANGLE

"Giordano - F1 just went ~50% electric and runs on compute, and no one owns the power-and-cooling lane on the grid. Cadillac is building its backbone from zero - Vertiv could architect it from day one. The hottest tech story of the year, on a data-driven sport. 25 minutes?"

SCORE COMPOSITION

TIMING 17 / 20 At a peak capital-and-brand moment: Q1'26 sales \$2.65B (+30%), backlog \$15.0B (up 109% YoY), stock +102% YTD, an NVIDIA partner, and it just completed the ThermoKey thermal-management acquisition (12 Jun 2026) - so the budget and the brand-build motive are both cresting now.	CAPACITY 19 / 20 A large-cap riding the AI-power supercycle with a \$15.0B backlog and strong cash generation - comfortably funds a top-tier multi-year partnership.	BRAND FIT 16 / 20 Critical power & cooling / data-center infrastructure is a distinct, open lane on the F1 grid; the AI-compute and 2026 electrification narratives map cleanly onto a data-driven sport - though as B2B infrastructure the brand logic leans on the real workstream to carry it.	URGENCY 14 / 20 The AI-power moment is peaking now, and a greenfield team (Cadillac) building its backbone from zero is a time-bound, build-it-from-the-start opportunity - though no single dated competitor trigger.	OPS FIT 16 / 20 MODE A: power continuity (UPS), precision cooling/thermal management and edge/data-center infrastructure for a team's CFD/simulation clusters, factory data centre and trackside edge - a real, deployable workstream, especially for a brand-new team.

RISKS & COUNTERS

B2B-INFRASTRUCTURE BRAND LOGIC Vertiv sells to data-centre operators, not consumers, so the sponsorship rationale isn't obvious at first glance. **Counter:** F1 is now full of exactly this play (Oracle, AWS, Dell, HP, Cisco) for B2B reach, the paddock IS Vertiv's buyer base, and the real power/cooling workstream carries the logic beyond a logo.

LARGE-CAP, MANY PRIORITIES A company at peak demand may not prioritise a single-team sponsorship. **Counter:** Lead with the flagship greenfield deployment (build the newest team's backbone) as a marquee, visible proof point at the company's peak-attention moment - a reference, not just spend.

DECISION-MAKER TO CONFIRM The current CMO/brand lead isn't verified here. **Counter:** Anchor on the verified CEO and the C-level strategic case; confirm the marketing owner before outreach rather than naming a generic title.
