

Divergent Technologies

Digital Manufacturing · AI Design + Metal Additive + Robotic Assembly · Torrance, California · Private (\$2.3B valuation, Series E, Sep 2025)

Divergent, the Torrance digital-manufacturing company whose printed titanium suspension sits on the McLaren W1, unveiled Monolith One, a twelve-laser metal printer, and a 430,000 sq ft second factory in Long Beach on 17 June 2026, an 8X step in output nine months after a \$290M Series E at \$2.3B.

THE CASE

On 17 June Divergent announced Monolith One, a laser powder-bed printer with twelve 2kW lasers, and a second factory: 430,000 sq ft in Long Beach, California, 64 printers, production from early 2027, an 8X rise in annual output. It follows the \$290M Series E closed on 15 September 2025 at a \$2.3B valuation, led by Rochefort Asset Management, after a \$230M Series D in November 2023. The platform, DAPS, pairs AI-enabled design with metal additive and robotic assembly, and has delivered 600+ unique parts for Lockheed Martin, RTX, McLaren, Aston Martin and Bugatti.

Divergent already builds the McLaren W1's Formula 1-inspired front suspension: titanium upper and lower wishbones and the upright, printed by Divergent under a multi-year collaboration with McLaren Automotive. The road-car side of the brand is a customer; the racing side, operationally separate under Zak Brown, is not yet a partner. A second factory needs a flagship to fill it, and a race car is the fastest proof a structural printer can give.

WHY NOW

The factory and the printer were announced on 17 June, with a new COO, CTO and Chief Commercial Officer named in the same month: a company staffing up to sell capacity. Silverstone falls days after the row; Monza and Austin sit inside the window, and 2027 rosters close in the fourth quarter.

BOTTOM LINE

A \$2.3B company that already prints the McLaren W1's suspension has just announced a twelve-laser printer and a 430,000 sq ft factory it must fill. McLaren Racing carries no manufacturing partner, the warm path runs through McLaren Automotive's own engineers, and Silverstone opens the window days after the row.

WHY MCLAREN MASTERCARD F1 TEAM

McLaren's roster is engineering-led, Dell, Cisco, Google Cloud, Groq, Arrow Electronics, but carries no additive or digital-manufacturing partner; Stratasys supplies polymer printing, a different lane from metal structures. The warm path is real: McLaren Automotive's engineers iterated the W1 wishbones on DAPS, and CYVN, which owns Automotive, holds a non-controlling stake in Racing. Alpine has 3D Systems and Haas is owned by a machine-tool brand; McLaren is where the printed-suspension story lives.

VALUE TO MCLAREN MASTERCARD F1 TEAM — MODE A (TECH IN THE CAR / CHAMPIONSHIP)

MODE A - operational. Titanium uprights, wishbone prototypes, brackets and cooling manifolds designed with DAPS' AI-enabled optimisation and printed on Monolith One, with robotic assembly for sub-structures: the workflow that produced the W1's suspension, applied to a race car's fast-iteration parts inside the cost cap. McLaren gets shorter design-to-track cycles and a US manufacturing source; Divergent gets a flagship for the new factory.

DEAL ARCHITECTURE

Entry as Official Digital Manufacturing Partner. **THREE YEARS**, 2027-2029, spanning the Long Beach ramp. Estimated \$3-5M a year, part-payable in printed parts and engineering time. Scope: sidepod placement, naming of a printed-structures programme, MTC content, hospitality at Silverstone, Austin and Las Vegas.

PRIMARY DECISION-MAKER

Lukas Czinger
PRESIDENT & CEO, CO-FOUNDER, DIVERGENT TECHNOLOGIES ·
VERIFIED

Czinger co-founded Divergent with his father Kevin, Executive Chairman, and runs Czinger Vehicles, whose 21C holds production-car lap records; a first F1 deal is his call. Path: Ben Nicholson, Chief Commercial Officer since 15 June, and Cooper Keller, COO. No CMO or CFO is listed.

OPENING ANGLE

Lead with the W1's wishbones.

“Lukas, your titanium wishbones already carry a McLaren; the Formula 1 team that inspired them has no manufacturing partner, and you have a factory to fill. 25 minutes before Silverstone to talk about a printed-structures programme?”

SCORE COMPOSITION

TIMING 15 / 20 Factory announced 17 Jun; shutdown mid-window.	CAPACITY 15 / 20 \$2.3B valuation, \$290M Series E; mid-tier partner money.	BRAND FIT 13 / 20 Motorsport-native manufacturing story; defence identity dilutes.	URGENCY 13 / 20 Capacity to sell from 2027; no hard deadline.	OPS FIT 15 / 20 MODE A: metal additive structures, proven on the W1.

RISKS & COUNTERS

DEFENCE IDENTITY The June story is Tomahawk airframes; a weapons-manufacturing partner may not suit McLaren's consumer-facing brand mix. **Counter:** Build the programme on the automotive lineage, W1, Bugatti, Aston Martin, and keep the activation technical.

SEPARATE COMPANIES McLaren Automotive is the customer; McLaren Racing is a different company with its own commercial team and top-of-grid pricing. **Counter:** Use the Automotive engineers as the reference; enter at technology-partner level, part-paid in parts.
