

Quantinuum

Quantum Computing · Broomfield, CO / Cambridge, UK · NASDAQ: QNT (IPO'd 4 Jun 2026; ~\$15.7B debut)

Honeywell spin-off Quantinuum just completed the largest-ever quantum IPO - listing on Nasdaq (QNT) on 4 June 2026 at a ~\$15.7B debut after a \$1.68B raise - a textbook born-big company with fresh capital, a brand-elevation mandate and no motorsport history at all.

THE CASE

Quantinuum is the highest-priority class in our mandate: a born-big spin-off (out of Honeywell) that just completed the largest quantum-computing IPO to date - pricing at \$60/share for a \$1.68B upsized raise and closing its 4 June 2026 Nasdaq debut at roughly \$15.7B (ticker QNT), with Honeywell and Cambridge Quantum retaining ~82%. An IPO is a one-time brand-elevation moment, and a newly public deep-tech company needs exactly the global enterprise visibility and mainstream credibility an F1 association provides - which technical channels alone cannot buy. It is freshly capitalized (it raised \$600M at a \$10B pre-money only in September 2025, backed by NVIDIA, JPMorgan, Quanta and others), even though FY2025 revenue was a modest ~\$31M - so capacity here comes from the balance sheet, not the P&L. Because no quantum brand exists anywhere on the grid, Quantinuum would define the category rather than contest it.

WHY NOW

The listing just happened (4 June) - the post-IPO window is precisely when a newly public company invests in institutional credibility and a differentiated brand, with fresh capital to deploy. A multi-year F1 innovation-partner deal now compounds the moment, turning the finance milestone into a sustained global brand. There is no competitor clock, so the deal can be shaped on Quantinuum's terms - but the brand-elevation window is widest in the months right after the bell.

DISCOVERY: SELF

WHY ASTON MARTIN

Aston Martin is the fit. Its premium engineering gravitas and British identity align with Quantinuum's Cambridge-and-Colorado footprint, and its hospitality audience is exactly the C-suite and government-adjacent enterprise buyer a quantum business courts. The association positions Quantinuum as 'the quantum edge in performance R&D' - a precision-and-compute halo on the grid's most boardroom-credible team - rather than as a mass-market consumer sponsor, which is the wrong register for this category.

VALUE TO ASTON MARTIN — MODE A (TECH IN THE CAR / CHAMPIONSHIP)

MODE A (developing). Quantum and advanced classical optimisation increasingly touch the problems an F1 team actually faces - aerodynamic and strategy simulation, logistics and scheduling across a global calendar, and materials R&D. Positioned as an innovation and R&D partner, Quantinuum offers Aston Martin a credible compute-frontier collaboration and a powerful talent-attraction halo, with a genuine roadmap toward simulation use cases rather than an empty logo. The honest framing is a forward-looking technical partnership: real engagement on hard optimisation problems, growing into deeper integration over the multi-year term.

DEAL ARCHITECTURE

Official Innovation / Quantum Partner tier on Aston Martin, minimum three years, estimated \$3-6M/yr, structured as an R&D-and-brand halo, with category exclusivity for quantum computing and a defined joint R&D workstream (optimisation/simulation) so the partnership has technical substance from day one.

PRIMARY DECISION-MAKER

Rajeeb Hazra
CHIEF EXECUTIVE OFFICER, QUANTINUUM - VERIFIED (EX-INTEL); BOARD CHAIRED BY HONEYWELL CEO VIMAL KAPUR

Rajeeb (Raj) Hazra, a former Intel executive, leads Quantinuum through its public-market debut and owns its institutional-brand agenda - the right entry point for a marquee partnership. Note: no CMO is publicly confirmed post-IPO, so brand decisions sit with the CEO and the IR/ CFO function during the just-listed window; Honeywell CEO Vimal Kapur chairs the board.

OPENING ANGLE

"Raj, you've just rung the Nasdaq bell - now the job is institutional credibility, and quantum is the one category no brand on the F1 grid can claim. Aston Martin is the boardroom audience. 25 minutes to own it?"

SCORE COMPOSITION

TIMING 16 / 20 Just completed the largest-ever quantum IPO (Nasdaq debut 4 Jun 2026) - the post-listing window is exactly when a newly public deep-tech company invests in institutional brand, with fresh capital to deploy.	CAPACITY 20 / 20 Raised \$1.68B in the IPO at a ~\$15.7B debut (after a \$600M round at \$10B pre-money in Sep 2025); capacity comes from the balance sheet (FY2025 revenue was a modest ~\$31M).	BRAND FIT 15 / 20 Quantum computing is the ultimate precision-and-compute narrative and the Anglo-American footprint suits a British team, though the category is more halo than literal in-car today.	URGENCY 12 / 20 No direct quantum rival exists on the grid, so the forcing function is the just-opened post-IPO brand-elevation window rather than a competitor.	OPS FIT 13 / 20 MODE A (developing): compute and optimisation R&D around simulation, strategy and logistics is a credible roadmap, even if not yet a literal in-car system.

RISKS & COUNTERS

NEWLY LISTED OPTICS As a freshly public stock, leadership attention and spend are calibrated to public-market optics, and securities rules constrain messaging around the listing. **Counter:** Position as institutional-credibility brand-building - exactly what a newly public company needs - with measurable enterprise and talent outcomes, and activate after the initial lock-up noise settles.

DEEP-TECH BRAND CAUTION A quantum firm may view F1 as off-strategy or too consumer-facing, and FY2025 revenue (~\$31M) invites spend scrutiny. **Counter:** Position strictly as enterprise credibility, government/partner visibility and talent attraction with a real joint R&D workstream; the \$1.68B just raised funds it comfortably - not consumer marketing.
