

Honeywell Aerospace

Aerospace · Propulsion & Avionics · Phoenix, AZ · Spin-off from Honeywell (standalone ~29 Jun 2026; \$17B+ revenue)

Honeywell Aerospace becomes a standalone ~\$17B-revenue public company on 29 June 2026 - a born-big aerospace pure-play with a precision-engineering F1 halo and a fresh brand-establishment mandate, but unproven motorsport-sponsorship appetite.

THE CASE

Honeywell is splitting into three public companies, and the final step - spinning off Honeywell Aerospace as a standalone business - distributes on 29 June 2026. The new company will have more than \$17B in annual revenue and be one of the largest publicly-traded aerospace suppliers, with leading positions in propulsion, cockpit and navigation systems, and auxiliary power. Two things make it worth a conversation. First, a spin-off is a brand-establishment moment: a newly independent public company must build an identity distinct from its former parent, which is exactly when first-mover brand investments get approved. Second, aerospace precision-engineering carries a genuine F1 halo - propulsion, materials and systems engineering are the sport's own language. The honest counterweight: this is a large, established B2B/B2G supplier whose customers (airlines, OEMs, defence) are won through procurement, not paddock hospitality, so its appetite for a motorsport sponsorship is unproven. Treat this as a relationship-and-halo play to open now, not a deal to force.

WHY NOW

The 29 June spin-off creates a finite brand-establishment window - new CEO Jim Currier and a fresh standalone leadership team will set the independent company's identity and brand-investment agenda in its first two quarters. Opening a conversation around the listing positions 1440 early, before the new entity's priorities harden, even though this is a longer-horizon relationship than a pre-IPO growth brand.

BOTTOM LINE

A born-big aerospace pure-play - \$17B+ revenue, standalone on 29 Jun 2026 - with a genuine F1 precision-engineering halo and a brand-establishment moment as it separates from Honeywell. The honest caveat: an established B2B/B2G supplier's sponsorship appetite is unproven, so this is a relationship-and-halo play, not a hot deal.

DISCOVERY: SELF

WHY ASTON MARTIN

Aston Martin is the fit: premium British engineering gravitas and a boardroom, government-adjacent hospitality audience that suits an aerospace brand's enterprise and institutional buyers, positioning Honeywell Aerospace as a precision-engineering halo rather than a mass-market sponsor. The aerospace lane is distinct from Aston Martin's existing technology partners, and as a US-headquartered company an American-team alternative (Cadillac) is the documented fallback if a US-sovereignty narrative is preferred.

VALUE TO ASTON MARTIN — MODE B (TECH SERVES THE TEAM OPERATION)

MODE B. The value is a precision-engineering brand association, an R&D/innovation narrative (materials, simulation, sensors and systems engineering are shared language between aerospace and F1), and premium hospitality - not an in-car technical integration. Aston Martin gains a blue-chip aerospace partner and an engineering-credibility story; Honeywell Aerospace gains a global stage to establish its standalone brand.

DEAL ARCHITECTURE

Official Aerospace / Engineering Partner tier on Aston Martin (Cadillac as a US-narrative alternative), minimum three years, estimated \$3-6M/yr, structured as an engineering-and-brand halo with a defined innovation/R&D narrative; calibrate to a relationship-first entry given unproven sponsorship appetite.

PRIMARY DECISION-MAKER

James Currier
PRESIDENT & CEO, HONEYWELL AEROSPACE - VERIFIED VIA SEC FORM 10-12B (EFFECTIVE AT THE ~29 JUN 2026 SEPARATION)

James E. (Jim) Currier was named President & CEO of the standalone Honeywell Aerospace (Phoenix, AZ), effective at the separation. As the leader of a newly independent public company, he and his fresh executive team own the brand-establishment agenda - the right entry point, with the CFO/IR function as co-decision-makers during the listing window. No standalone CMO is yet publicly confirmed.

OPENING ANGLE

"Jim, the spin-off is the moment Honeywell Aerospace defines its own identity - and precision engineering is F1's native language. Aston Martin is the boardroom stage to establish the standalone brand. Worth an exploratory 25 minutes?"

SCORE COMPOSITION

TIMING 16 / 20 Standalone spin-off distributes 29 Jun 2026 - a one-time brand-establishment moment as a newly independent public company sets its identity apart from Honeywell.	CAPACITY 18 / 20 \$17B+ annual revenue; one of the largest publicly-traded aerospace suppliers - capacity is a non-issue.	BRAND FIT 13 / 20 Aerospace precision-engineering (propulsion, navigation, materials) carries a genuine F1 halo, but it is an established B2B/B2G supplier whose airline/defence/OEM buyers are not reached via F1 hospitality - so fit is a halo, not a pipeline.	URGENCY 11 / 20 The spin-off is the window, but there is no competitor clock and established-company inertia is real.	OPS FIT 11 / 20 MODE B: a brand, innovation-halo and premium-hospitality association rather than literal in-car technology.

RISKS & COUNTERS

UNPROVEN SPONSORSHIP APPETITE Established aerospace suppliers sell via procurement, not paddock hospitality, and may see F1 as off-strategy. **Counter:** Lead with the brand-establishment moment, an engineering/innovation narrative and talent attraction - kept relationship-first and modest, not a hard sell; this is the rare window when a spin-off is open to defining a new identity.

DEFENCE/B2G ADJACENCY Honeywell Aerospace has defence and government business, which can complicate consumer-facing brand placement. **Counter:** Anchor strictly to commercial-aerospace precision engineering and innovation, the brand-safe core, and keep activation enterprise/credibility-focused.
