

Coralogix

Full-Stack Observability (logs / metrics / traces / APM / SIEM) · San Francisco, CA (R&D in Tel Aviv) · Private (\$1.6B; ~\$150-200M ARR; Series F Jun 2026)

Coralogix raised a \$200M Series F at \$1.6B (Advent + CPPIB) and is running at a \$150-200M ARR run-rate - a full-stack observability leader with fresh capital and a brand mandate, no motorsport presence, and an open observability lane on the F1 grid while a rival sits at McLaren.

THE CASE

Coralogix, a full-stack observability platform (logs, metrics, traces, APM and cloud-security/SIEM), closed a \$200M Series F at a \$1.6B valuation on 3 June 2026 - led by Advent and CPPIB, \$550M raised to date - while operating at a \$150-200M ARR run-rate (~60% growth) and serving 5,000+ customers including IBM, Tradeweb and JFrog. That gives it fresh capital and the brand-building motive of a scaling pre-IPO leader, and it has never entered motorsport. Observability is an open, ownable lane on the grid: Williams' enterprise roster is storage (VAST Data), collaboration (Atlassian) and security (Keeper) - no monitoring brand - while a direct rival, Splunk (now part of Cisco), already sits at McLaren. Co-founded and led by CEO Ariel Assaraf, Coralogix has a sitting CMO, Brian Mullen, who owns brand, partner ecosystem and strategic alliances - the precise, warm entry point.

WHY NOW

The Series F closed eleven days ago, so the capital and the brand mandate are live right now, and post-raise is exactly when a scaling platform invests in enterprise brand. There is also a competitor clock: Splunk-via-Cisco is already on the grid at McLaren, so claiming the open observability position - on a data-led team like Williams - is a move that both builds brand and denies the category to a rival. The decision sits with a sitting CMO (Brian Mullen) who owns alliances, so there is a clear, fast path to a yes.

GRID FIT — CATEGORY-WHITESPACE CHECK ACROSS THE F1 GRID (1440 TEAM-FIT ENGINE)

Williams	OPEN	no rival in this category lane
McLaren	TAKEN	observability / APM, networking & security
Red Bull Racing	OPEN	no rival in this category lane
Aston Martin	OPEN	no rival in this category lane

BOTTOM LINE

Eleven days after a \$200M Series F at \$1.6B (Advent + CPPIB) - ~60% growth to a \$150-200M ARR run-rate - Coralogix has fresh capital and a brand mandate. Observability is an open, ownable lane on the F1 grid (Williams' partners are storage/ collaboration/security, not monitoring), and a direct rival (Splunk-via-Cisco) already sits at McLaren - so claim the category now. CMO Brian Mullen owns partnerships; this is his call.

DISCOVERY: SELF

WHY WILLIAMS

Williams is a data-led 'engineering revival' team and a self-described preferred testing ground for enterprise software, with partners in storage, collaboration and security but none in observability - a distinct, unclaimed lane Coralogix could own. It is a credible, ownable stage (not title-level spend) for a \$1.6B mid-cap, with a real deployment story across the team's software estate and a scale-up path if the model proves out.

VALUE TO WILLIAMS — MODE A (TECH IN THE CAR / CHAMPIONSHIP)

MODE A with real substance on three fronts. (1) TECHNICAL / OPS: Williams runs a sprawling, mission-critical software estate - race-weekend telemetry pipelines, factory CFD/simulation systems, trackside-to-factory data links and a growing enterprise-app stack - that has to be monitored in real time; Coralogix's full-stack observability (logs, metrics, traces, APM plus SIEM) is a genuine, deployable workstream to cut mean-time-to-resolution and catch anomalies before they cost track time, sitting naturally on top of VAST's storage layer and alongside Atlassian's engineering workflow. That is a flagship 'we monitor the team that races' reference deployment, not a logo. (2) COMMERCIAL / B2B: Williams' paddock audience is dense with the CIO/CTO/SRE and platform-engineering buyers Coralogix sells to, so hospitality becomes a working enterprise-pipeline channel, while Williams gains a well-capitalised (\$1.6B) observability anchor that fits its proven enterprise-software-partner pattern and helps it keep attracting blue-chip tech deals - and owning the open observability category denies it to the Splunk-via-Cisco rival at McLaren. (3) BRAND / CONTENT / TALENT: a race weekend is the ultimate real-time, low-MTTR, anomaly-detection environment - a perfect, ownable analogy for Coralogix's value prop - powering a co-developed 'observability under pressure' content series, plus an SRE/platform-engineering recruiting halo both sides compete for. Williams gets a real monitoring deployment and aligned co-marketing; Coralogix gets a live reference and a premium B2B stage post-raise.

DEAL ARCHITECTURE

Official Observability Partner tier on Williams, minimum three years, ~\$3-5M/yr, with category exclusivity in observability/APM and a working deployment monitoring the team's software estate.

PRIMARY DECISION-MAKER

Brian Mullen

CHIEF MARKETING OFFICER, CORALOGIX - VERIFIED (OWNS BRAND, PARTNER ECOSYSTEM AND STRATEGIC ALLIANCES)

CMO who leads global marketing strategy and the partner/alliances ecosystem - the natural owner of a sponsorship decision and the warm entry point. Approach Mullen with a ready-made observability-partner thesis; CEO & co-founder Ariel Assaraf owns the post-raise brand narrative and is the escalation point.

OPENING ANGLE

"Brian - you just raised \$200M, observability is the one enterprise lane no one owns on the F1 grid, and your rival Splunk is already at McLaren. Williams is data-led and a proven home for software partners - claim the category before someone else does. 25 minutes?"

SCORE COMPOSITION

TIMING 18 / 20 Just closed a \$200M Series F at \$1.6B (3 Jun 2026, led by Advent and CPPIB) - ~60% growth to a \$150-200M ARR run-rate - so it has fresh capital and a brand-building window right now.	CAPACITY 15 / 20 \$1.6B valuation, \$150-200M ARR run-rate and \$550M raised - comfortably funds a value-to-mid 'Official Observability Partner' tier (not title-level).	BRAND FIT 16 / 20 Observability is a distinct, open lane on the grid: Williams' enterprise partners are storage (VAST), collaboration (Atlassian) and security (Keeper) - no monitoring/APM brand - and Williams is a proven 'testing ground for enterprise software'.	URGENCY 13 / 20 Fresh raise plus a competitor counter-clock: a direct rival (Splunk, via Cisco) already sits at McLaren, so there is real pressure to claim an observability position before the category consolidates on the grid.	OPS FIT 14 / 20 MODE A: an F1 team runs a sprawling software estate (race-weekend telemetry pipelines, factory/simulation systems, trackside-to-factory links) that needs real-time monitoring - a genuine, deployable observability use case.
---	---	---	--	---

RISKS & COUNTERS

WILLIAMS IS ALREADY SOFTWARE-PARTNER-HEAVY Atlassian, VAST Data, Keeper and Anthropic already populate Williams' tech roster. **Counter:** Those partners sit in distinct lanes (collaboration, storage, security, AI); observability/APM is unclaimed, and Williams' proven appetite for enterprise-software deals is a positive signal of fit, not a barrier.

A RIVAL IS ALREADY ON THE GRID Splunk (via Cisco) is McLaren's observability/security partner. **Counter:** That is the urgency, not a blocker - claim the open position on a better-fit, data-led team (Williams) now, before the category consolidates around the McLaren incumbent.

MID-CAP SPEND DISCIPLINE POST-RAISE A scaling company watches discretionary spend after a raise. **Counter:** Lead with a value-to-mid Official Observability Partner tier tied to a real deployment and measurable B2B pipeline, not title-level spend.
