

Eaton

Intelligent Power Management / Electrical · Dublin, Ireland · NYSE: ETN (record \$27.4B FY25 revenue; ~\$100B+ cap)

Eaton - the intelligent-power-management leader at record \$27.4B revenue, riding the electrification and AI-power supercycle - has never been in F1, and the electrical backbone of a modern team's factory and trackside is its core business.

THE CASE

Eaton, the intelligent-power-management leader, posted record FY25 revenue of \$27.4B (+10%) and is concentrating on its core Electrical and Aerospace businesses as electrification, AI-data-centre power and reindustrialisation surge (it is spinning off its smaller Vehicle/eMobility segment). It has never entered F1. The fit is on-profile (the nVent/Versigent electrical thread, at large-cap scale and public) and real: a modern F1 operation - factory, wind tunnel, driver-in-loop simulator, energy-hungry compute and trackside - runs on resilient electrical power, exactly Eaton's domain. Aston Martin, which built a brand-new campus (factory, wind tunnel, simulator) and now runs its own works power-unit programme, is an intensive electrical-load build with an open electrical lane (its partners are compute/AI/data: Aramco, CoreWeave, Arm, NetApp, Cognition). Verified decision path: CEO Paulo Ruiz (C-level sponsor) and Global Marketing & Communications Director Camie Hanily (brand/sponsorship owner), with Eaton's data-centre/electrical commercial leadership as technical counterpart.

WHY NOW

Eaton is at the crest of the electrification and AI-power demand cycle, with record revenue and brand investment to match, and F1's 2026 electrical-heavy rules make a power-management partner on-message. Aston Martin's new campus and works power-unit programme mean its electrical infrastructure is scaling now.

BOTTOM LINE

The intelligent-power-management leader (record \$27.4B FY25 revenue) riding the electrification + AI-data-centre power supercycle. On-profile (the nVent electrical thread at scale, public). Real workstream: the electrical backbone of a team's new factory, wind tunnel, simulator and trackside operations. Aston Martin's new campus is the build; the electrical lane is open. Decision path: CEO Paulo Ruiz + Marcomms Director Camie Hanily.

WHY ASTON MARTIN

Aston Martin's purpose-built campus - factory, wind tunnel, state-of-the-art simulator - plus a new works power-unit programme is one of the most electrically intensive builds on the grid, and its partner roster is compute/AI/data, not electrical-power, so the lane is open. Eaton can underpin the team's power resilience and efficiency as a real workstream.

VALUE TO ASTON MARTIN — MODE A (TECH IN THE CAR / CHAMPIONSHIP)

MODE A, real mechanics. (1) TECHNICAL (the core): a championship F1 operation is electrically intensive - a factory, a wind tunnel, a driver-in-loop simulator, energy-hungry CFD/compute and trackside garages that cannot lose power - and Eaton's intelligent power management (UPS, switchgear, distribution, energy optimisation) underpins exactly that, improving resilience and energy efficiency across the campus and at the track: a genuine, deployable workstream, not signage. (2) COMMERCIAL / B2B: Eaton sells to data-centre, industrial and utility buyers who populate the F1 paddock - hospitality becomes a pipeline, while Aston gains a deep-pocketed (~\$100B+) electrical anchor. (3) BRAND / TALENT: 'the power behind performance' ties Eaton to F1's electrification era, with an electrical-engineering talent halo. Aston gets power resilience/efficiency; Eaton gets a visible reference at its peak.

DEAL ARCHITECTURE

Official Power-Management / Electrical Partner on Aston Martin, minimum three years, ~\$4-6M/yr, with category exclusivity in electrical power management and a deployment across the team's campus and trackside power.

PRIMARY DECISION-MAKER

Paulo Ruiz
CEO, EATON - VERIFIED

Chief Executive driving Eaton's electrical/data-centre growth strategy - the C-level sponsor. Decision path: brand/sponsorship owned by Global Marketing & Communications Director Camie Hanily; Ruiz as executive sponsor; Eaton's data-centre/electrical commercial leadership (e.g. North American sales lead Molly Murphy) as the technical/commercial counterpart.

OPENING ANGLE

"Your new campus - factory, wind tunnel, simulator - and a works power unit run on resilient electrical power, and no one owns that lane on the grid. Eaton is the power-management leader at the electrification moment. A real deployment, not a logo. 25 minutes?"

SCORE COMPOSITION

TIMING 15 / 20 Record FY25 revenue of \$27.4B (+10%) on the electrification and AI-data-centre power surge, and a strategy now focused on core Electrical + Aerospace - capital and brand momentum are strong.	CAPACITY 18 / 20 ~\$100B+ market cap, \$27.4B revenue - easily funds a top-tier partnership.	BRAND FIT 15 / 20 Electrical power management is on-profile and motorsport-adjacent, but it overlaps the broader power-infrastructure space; the specific electrical lane is open on Aston Martin's new campus.	URGENCY 13 / 20 The electrification/data-centre power cycle is hot, but no single dated trigger in F1.	OPS FIT 15 / 20 MODE A: a modern F1 operation - factory, wind tunnel, driver-in-loop simulator, trackside - is electrically intensive and needs resilient power management, exactly Eaton's core.

RISKS & COUNTERS

OVERLAPS THE BROADER POWER SPACE Power-infrastructure brands (e.g. cooling/critical-power) are circling F1. **Counter:** Eaton's lane is intelligent electrical power management/distribution specifically, distinct and open on Aston Martin's campus build.

LARGE-CAP, MANY PRIORITIES A company at peak demand may not prioritise one team. **Counter:** Frame as a flagship electrification reference at the company's peak-attention moment, right-sized to a real deployment.

B2B BRAND LOGIC Eaton sells to industry, not consumers. **Counter:** The paddock is Eaton's buyer base and the campus/trackside power workstream carries the logic.
