Electra

EV Fast-Charging Network (urban hubs) · Paris, France · Private (>€1B secured; approaching unicorn; EV fast-charging)

France's EV fast-charging champion Electra - >€1B secured, approaching unicorn, backed by EDF and SNCF - has never been in motorsport, and Formula E offers the rare case where the audience (EV-positive fans) is literally the company's customer base.

THE CASE

Electra, founded in 2021, is France's leading urban EV fast-charging network, scaling toward 2,200 stations and 15,000 charge points across nine European countries by 2030. It has secured over €1B in total capital - a €304M Series B led by Dutch pension fund PGGM plus €433M of debt from a syndicate including ING and MUFG - is backed by EDF and SNCF's investment arm, and is, in its CEO's words, approaching unicorn status. It has never touched motorsport. EV charging is the single most on-message category for an all-electric championship, and Formula E is the rare property where the audience and the customer base are the same people: FE fans are EV-positive, urban, affluent European consumers - precisely the drivers Electra needs to choose its hubs. One honest nuance: ABB is FE's series-level charging partner (it charges the race cars), a distinct technical role from Electra's public-network brand, so this is a team-level brand-and-audience play, not a race-car-charging claim. Led by co-founder and CEO Aurélien de Meaux, the right entry point.

WHY NOW

Electra is in an aggressive European land-grab - new markets, new cities, a race for driver mindshare against other charging networks - which is exactly when consumer-brand investment pays off, and Formula E reaches its target EV-driver audience in the very European cities it is entering. There is no hard clock, so the value of moving now is positional: lock a differentiated, on-message platform and the founder relationship while inbound interest is low (~30) and before a charging rival claims the space.

BOTTOM LINE

France's EV fast-charging champion - >€1B secured capital (€304M Series B led by PGGM + €433M debt), approaching unicorn, backed by EDF and SNCF - scaling to 2,200 stations across nine European countries. The single most on-message category for electric racing, with a rare audience match: Formula E's EV-positive fans are Electra's exact customers. Capacity is capex-heavy, so this is a value-tier brand play; CEO Aurélien de Meaux is the entry.

DISCOVERY: SELF

WHY NISSAN FORMULA E

Nissan's Formula E team is France-based (matching French Electra) with an EV-pioneer identity and an explicitly open 'EV tech' category, and it races in the European host cities central to Electra's expansion - giving Electra both cultural fit and audience reach. (Per our signals-not-placements rule, Nissan is judged on real grid occupancy only; another 1440 signal aimed there in a different category does not occupy it.)

VALUE TO NISSAN FORMULA E — MODE B (TECH SERVES THE TEAM OPERATION)

MODE B with concrete, named mechanics - not a logo. (1) AUDIENCE / BRAND ENGINE: this is the rare sponsorship where the team's fans ARE the sponsor's customers - FE's EV-positive, urban European audience is exactly who Electra needs charging at its hubs, so activations are genuinely useful, not decorative: QR-to-charge fan offers, host-city hub activations at the European E-Prix Electra is expanding into, co-branded 'charge like the championship' driver content, and loyalty tie-ins that convert FE fans into Electra users - a measurable acquisition channel for Electra and a fan-perk and revenue-share opportunity for Nissan. (2) COMMERCIAL: Electra's backers and partners (EDF, SNCF, fleet operators, municipalities) are the energy, transport and city decision-makers who attend FE and its host-city programmes, so team hospitality becomes a working B2B channel, while Nissan adds a fast-growing, on-message EV-infrastructure partner in an open category. (3) BRAND / CONTENT: 'the team that races on electricity, the network that keeps Europe charged' is an ownable, sustainability-aligned co-marketing narrative across both brands' European footprints. Nissan gets a fan-perk-and-acquisition partner with real activation substance; Electra gets an on-message stage in front of its exact customers in its exact expansion markets.

DEAL ARCHITECTURE

Value-tier Official EV-Charging Partner on Nissan Formula E, minimum three years, ~\$1.5-2.5M/yr (right-sized to a capex-heavy scale-up), with category exclusivity in public EV charging and a fan-acquisition + host-city activation workstream.

PRIMARY DECISION-MAKER

Aurélien de Meaux

CO-FOUNDER & CEO, ELECTRA - VERIFIED

Co-founder and CEO, a serial French entrepreneur leading Electra's European expansion - the owner of brand and partnership decisions at this founder-led company and the right entry point. Approach him with a fan-acquisition-led thesis: FE's audience is Electra's customer, in the cities Electra is entering.

OPENING ANGLE

"Aurélien - Formula E's fans are your customers: EV-positive, urban, European, in the exact cities you're expanding into. A charging network on the electric championship isn't a logo, it's an acquisition channel. 25 minutes before a rival network claims the lane?"

SCORE COMPOSITION

TIMING

14 / 20

Raised a €304M Series B (led by PGGM) plus €433M in debt and is aggressively expanding across Europe - active brand-building as it scales, though the last equity round is ~a year old, not a this-week event.

CAPACITY

14 / 20

Over €1B secured, but much of it is debt earmarked for building stations (capex-heavy) and the valuation is still sub-unicorn - so realistically a value-tier brand deal, not a marquee spend.

BRAND FIT

16 / 20

EV charging is the single most on-message category for an all-electric championship, and there is a rare direct audience match - Formula E's EV-positive fans are Electra's exact customers (note: ABB is FE's series-level race-car charging partner, a distinct technical role).

URGENCY

11 / 20

Brand-building motive as it expands into new European markets, but no dated competitor trigger.

OPS FIT

13 / 20

MODE B: a brand-and-audience play with charging-narrative adjacency, not a team technical workstream - scored honestly.

RISKS & COUNTERS

CAPACITY IS CAPEX-HEAVY Most secured capital is debt for building stations, valuation still sub-unicorn. **Counter:** Right-size to a value-tier deal tied to a measurable fan-acquisition channel - the activation pays for itself by converting FE fans into Electra users, so it's marketing spend with a return, not discretionary signage.

ABB IS FE'S CHARGING PARTNER ABB charges the race cars at series level, which could read as a charging conflict. **Counter:** Distinct roles: ABB is the technical race-car charger (series), Electra is a public/urban charging network (team brand) - position Electra precisely as the consumer-network brand, not a race-car-charging claim.

UNPROVEN SPONSORSHIP APPETITE A founder-led infra scale-up has never done a deal like this. **Counter:** Lead with the audience-match ROI and a low-commitment, measurable structure; let performance, not a hard sell, justify scaling.
