

GE Vernova

Electrification / Power / Grid · Cambridge, MA · NYSE: GEV (~\$303B cap; FY25 rev ~\$38B; spun out 2024)

GE Vernova - the ~\$303B electrification-and-power company GE spun out in 2024, riding the energy-transition supercycle - has never been in motorsport, and 'electrifying the world' maps directly onto the world's electric racing championship.

THE CASE

GE Vernova, the electrification/power/grid pure-play that GE spun out as an independent company in 2024, is now ~\$303B in market cap on ~\$38B revenue, riding the energy-transition and AI-data-centre power supercycle (Q1'26 backlog up ~\$13B quarter-on-quarter; FY26 guidance raised; targeting ~50% revenue growth by 2028). It has never entered motorsport. It is the Versigent born-big-spin-off archetype at marquee scale, and on-profile (electrification, public). For Formula E, 'the company electrifying the world' on the world's electric racing series is a near-perfect thematic match. Honest framing: GE Vernova doesn't build race-car technology, so the team-level workstream is clean and temporary event power / microgrids for FE's city races plus a hard sustainability story - real, but more brand than in-car - and it is scored accordingly. Verified decision path: Chief Commercial Officer Pablo Koziner (the partnership owner) and CEO Scott Strazik (C-level sponsor).

WHY NOW

GE Vernova is at the crest of the power/electrification cycle with raised guidance and a fresh balance sheet from its 2024 spin-off, so brand investment is live, and Formula E - the first net-zero-certified series - is the most on-message stage for an electrification leader during the energy transition.

BOTTOM LINE

The electrification-and-power pure-play GE spun out in 2024 (~\$303B cap, ~\$38B revenue), riding the energy-transition + AI-power supercycle (backlog +\$13B QoQ; guidance raised). The Versigent born-big-spin-off archetype at marquee scale, perfectly on-theme for electric racing. Honest: the team workstream is clean event-power/microgrid + sustainability (more brand than in-car), so scored accordingly. Decision-maker: Chief Commercial Officer Pablo Koziner.

DISCOVERY: SELF

WHY PORSCHE

Porsche is the reigning FE champion and the grid's premium electrification-performance brand, with an open electrification/clean-power lane - so 'the company electrifying the world with the team that wins on electricity' is a clean, on-message pairing. The workstream centres on clean event/paddock power and the sustainability narrative rather than car technology.

VALUE TO PORSCHE — MODE B (TECH SERVES THE TEAM OPERATION)

MODE B with concrete mechanics (not a bare logo). (1) ENERGY / EVENT POWER: FE races in city centres on temporary infrastructure, and GE Vernova's grid, microgrid and clean-power capability can supply and certify cleaner event and paddock power and a hard-data sustainability story that FE's net-zero agenda rewards - a real, if off-car, operational contribution. (2) COMMERCIAL / B2B: GE Vernova sells to utilities, governments and data-centre operators, many of whom engage FE through its host-city and sustainability programmes - team hospitality becomes a channel, while Porsche gains a marquee, deep-pocketed electrification anchor. (3) BRAND / TALENT: 'electrifying the world, racing on electricity' is an ownable co-marketing narrative pairing the electrification leader with the champion electric team, plus an energy/electrical engineering-talent halo. Porsche gets cleaner event power and a blue-chip anchor; GE Vernova gets an on-message global stage.

DEAL ARCHITECTURE

Official Electrification / Clean-Power Partner on the Porsche Formula E Team, minimum three years, ~\$3-5M/yr, centred on clean event/paddock power and a sustainability-data and co-marketing programme.

PRIMARY DECISION-MAKER

Pablo Koziner
CHIEF COMMERCIAL OFFICER, GE VERNOVA - VERIFIED

Chief Commercial Officer across Power, Wind and Electrification - the natural owner of a sponsorship/partnership decision and the entry point. Decision path: Koziner (commercial/partnership) -> CEO Scott Strazik (C-level sponsor), with the Electrification segment leadership as the technical counterpart for event-power delivery.

OPENING ANGLE

"Pablo - you're electrifying the world, and Formula E is the world's electric racing championship and the first net-zero-certified sport. Clean event power plus a verified sustainability story with the champion Porsche team - on-message, at your peak. 25 minutes?"

SCORE COMPOSITION

TIMING 16 / 20 A 2024 born-big spin-off now at the crest of the power/electrification supercycle - backlog up ~\$13B quarter-on-quarter and FY26 guidance raised - so capital and brand-build motive are aligned.	CAPACITY 19 / 20 ~\$303B market cap and ~\$38B revenue - capacity is not a constraint at any tier.	BRAND FIT 16 / 20 'The company electrifying the world' on the world's electric racing championship is a near-perfect thematic match, and the electrification lane is open on Porsche, the reigning FE champion and a premium electrification brand.	URGENCY 13 / 20 Energy-transition and data-centre electrification demand are peaking, but no single dated FE trigger.	OPS FIT 13 / 20 MODE B (honestly): GE Vernova doesn't make race-car tech, so the workstream is clean/temporary event power and microgrids for city E-Prix plus a verified sustainability story - real but not in-car.

RISKS & COUNTERS

WORKSTREAM IS OFF-CAR (BRAND-LEANING) GE Vernova doesn't make race-car technology, so the team-level deployment is event power, not performance tech. **Counter:** Score and pitch it honestly as event-power + sustainability + brand; the thematic match and capacity are the strengths, named with concrete mechanics rather than a logo.

UTILITY-SCALE COMPANY, NICHE SPONSORSHIP A power giant may see a race team as off-mission. **Counter:** Frame as the most on-message stage for the energy transition during its brand-build, right-sized and tied to event-power + sustainability outcomes.

EVENT POWER OFTEN PROMOTER-RUN FE's event infrastructure is partly run by the promoter, not the team. **Counter:** Structure the energy workstream at the team/paddock level and co-develop the sustainability narrative; keep the team value concrete.
